Integrated Product, Process and Enterprise Design Ben Wang, 2012-12-06 The need exists in the private sector and government manufacturing sites to reduce product development time production lead times inventory and non value added activities At the same time there is increased pressure to improve manufacturing process yields production efficiency and resource utilization Much of the technology required to meet these needs already exists but an integrated structure that can demonstrate the potential for the technology in a concurrent engineering context does not This book provides a road map for building the integrated technology environment to evaluate existing products manufacturing processes and system design tools This book details innovative approaches that will significantly improve design manufacturing technology development and deployment capabilities for civilian and defense applications These approaches are integrated product process and system design IPPSD initiatives which will greatly enhance the manufacturing competitiveness of the economy These approaches involve the use of simulation modeling tools and computerized virtual workstations in conjunction with a design environment which allows a diverse group of researchers manufacturers and suppliers to work within a comprehensive network of shared knowledge The IPPSD infrastructure consists of virtual workstations servers and a suite of simulation quantitative computational analytical experimental and qualitative tools Such an IPPSD infrastructure will permit effective

and efficient predictions of complete product design manufacturing process design and customer satisfaction

Imaging Spectrometry Freek D. van der Meer, S.M. de Jong, 2011-03-29 A significant step forward in the world of earth observation was made with the development of imaging spectrometry Imaging spectrometers measure reflected solar radiance from the earth in many narrow spectral bands Such a spectroscopical imaging system is capable of detecting subtle absorption bands in the reflectance spectra and measure the reflectance spectra of various objects with a very high accuracy As a result imaging spectrometry enables a better identification of objects at the earth surface and a better quantification of the object properties than can be achieved by traditional earth observation sensors such as Landsat TM and SPOT The various chapters in the book present the concepts of imaging spectrometry by discussing the underlying physics and the analytical image processing techniques The second part of the book presents in detail a wide variety of applications of these new techniques ranging from mineral identification mapping of expansive soils land degradation agricultural crops natural vegetation and surface water quality Additional information on extras springer com Sample hyperspectral remote sensing data sets and ENVI viewing software Freelook are available on <http://extras.springer.com>

Advanced Materials & Processes ,1994 **Manual of Security Sensitive Microbes and Toxins** Dongyou Liu,2014-04-08 Security sensitive microbes viruses bacteria fungi and parasites and toxins which are often referred to as the select agents and toxins have the capacity to cause serious illness and death in humans animals and plants This book is an authoritative and comprehensive review of security sensitive microbes viruses bacteria fungi and parasites and toxins with an emphasis on the state of the art in the field Written by experts in the field the chapters present authoritative reviews each one covering a single microbe or toxin with respect to its classification biology epidemiology pathogenesis identification diagnosis treatment and prevention The chapters also discuss the limitations of our current knowledge and challenges relating to improved detection and control of the microbe or toxin *Instance Selection and Construction for Data Mining* Huan Liu,Hiroshi Motoda,2013-03-09 The ability to analyze and understand massive data sets lags far behind the ability to gather and store the data To meet this challenge knowledge discovery and data mining KDD is growing rapidly as an emerging field However no matter how powerful computers are now or will be in the future KDD researchers and practitioners must consider how to manage ever growing data which is ironically due to the extensive use of computers and ease of data collection with computers Many different approaches have been used to address the data explosion issue such as algorithm scale up and data reduction Instance example or tuple selection pertains to methods or algorithms that select or search for a representative portion of data that can fulfill a KDD task as if the whole data is used Instance selection is directly related to data reduction and becomes increasingly important in many KDD applications due to the need for processing efficiency and or storage efficiency One of the major means of instance selection is sampling whereby a sample is selected for testing and analysis and randomness is a key element in the process Instance selection also covers methods that require search Examples can be found in density estimation finding the representative instances data points for a cluster boundary hunting finding the critical instances to form boundaries to differentiate data points of different classes and data squashing

producing weighted new data with equivalent sufficient statistics Other important issues related to instance selection extend to unwanted precision focusing concept drifts noise outlier removal data smoothing etc Instance Selection and Construction for Data Mining brings researchers and practitioners together to report new developments and applications to share hard learned experiences in order to avoid similar pitfalls and to shed light on the future development of instance selection This volume serves as a comprehensive reference for graduate students practitioners and researchers in KDD
