Secondhand Smoke Exposure and Cardiovascular Effects Institute of Medicine,Board on Population Health and Public Health Practice,Committee on Secondhand Smoke Exposure and Acute Coronary Events,2010-02-21 Data suggest that exposure to secondhand smoke can result in heart disease in nonsmoking adults Recently progress has been made in reducing involuntary exposure to secondhand smoke through legislation banning smoking in workplaces restaurants and other public places The effect of legislation to ban smoking and its effects on the cardiovascular health of nonsmoking adults however remains a question Secondhand Smoke Exposure and Cardiovascular Effects reviews available scientific literature to assess the relationship between secondhand smoke exposure and acute coronary events The authors experts in secondhand smoke exposure and toxicology clinical cardiology epidemiology and statistics find that there is about a 25 to 30 percent increase in the risk of coronary heart disease from exposure to secondhand smoke Their findings agree with the 2006 Surgeon General s Report conclusion that there are increased risks of coronary heart disease morbidity and mortality among men and women exposed to secondhand smoke However the authors note that the evidence for determining the magnitude of the relationship between chronic secondhand smoke exposure and coronary heart disease is not very strong Public health professionals will rely upon Secondhand Smoke Exposure and Cardiovascular Effects for its survey of critical epidemiological studies on the effects of smoking bans and evidence of links between secondhand smoke exposure and cardiovascular events as well as its findings and recommendations *Second hand smoke and COPD: lessons from animal studies* Adelheid Kratzer,Laima Taraseviciene-Stewart,Michael Borchers,2015-05-07 Cigarette smoke exposure is the key initiator of chronic inflammation alveolar destruction and the loss of alveolar blood vessels that lead to the development of chronic obstructive pulmonary disease COPD which is comprised of emphysema and chronic bronchitis Exposure to secondhand smoke SHS is the major risk factor for non smokers to develop emphysema While the first hand smoke is directly inhaled by smokers passive smoking occurs when non smokers are involuntary exposed to environmental tobacco smoke also known as second hand smoke SHS SHS is a mixture of 2 forms of smoke that come from burning tobacco side stream smoke smoke that comes from the end of a lit cigarette pipe or cigar and mainstream smoke smoke that is exhaled by a smoker These two types of smoke have basically the same composition however in SHS many toxic components are more concentrated than in first hand smoke therefore more hazardous for people s health Several pathological events have been implicated in the development of SHS induced COPD but many aspects of this pathology remain poorly understood halting

the development of new advanced treatments for this detrimental disease In this respect we have welcomed leading investigators in the field to share their research findings and provide their thoughts regarding the mechanisms of the SHS exposure induced immune responses and inflammatory mechanisms of lung destruction in SHS induced COPD and related comorbidities *Children and Secondhand Smoke Exposure* Janice R. Harrington, 2009 Today massive and conclusive scientific evidence documents the serious health risks that second hand smoke poses to children and the list of these health conditions has lengthened The 2006 Surgeon General's report on The Health Consequences of Involuntary Exposure to Tobacco Smoke concludes that children who are exposed to second hand smoke are at an increased risk for sudden infant death syndrome lower respiratory infections middle ear disease more severe asthma respiratory symptoms and slowed lung growth Because their respiratory immune and nervous systems are still developing children are especially vulnerable to the health effects of second hand smoke In addition young children typically are exposed to second hand smoke involuntarily and have limited options for avoiding exposure They depend on their parents and on adults around them for protection
