Advances in Cryptology - EUROCRYPT '91 Donald W. Davies, 2003-06-30 A

series of open workshops devoted to modem cryptology began in Santa Barbara California in 1981 and was followed in 1982 by a European counterpart in Burg Feurstein Germany The series has been maintained with summer meetings in Santa Barbara and spring meetings somewhere in Europe At the 1983 meeting in Santa Barbara the International Association for Cryptologic Research was launched and it now sponsors all the meetings of the series Following the tradition of the series papers were invited in the form of extended abstracts and were reviewed by the programme committee which selected those to be presented After the meeting full papers were produced in some cases with improvements and corrections These papers form the main part of the present volume They are placed in the same order that they took at the meeting and under the same headings for ease of reference by those who attended The classification under these headings was a little arbitrary needing to fit the timing of the day's activities but it makes a workable method of arrangement Also following tradition a rump session was held during one evening under the effective chairmanship of John Gordon These were short presentations and those present found them to have some real interest therefore we have taken the unusual step of including short papers contributed by the rump session speakers at the end of this volume with a necessarily simplified review process

Topics in Geometry, Coding Theory and Cryptography Arnaldo Garcia, Henning Stichtenoth, 2006-11-15 The theory of algebraic function fields over finite fields has its origins in number

theory However after Goppa's discovery of algebraic geometry codes around 1980 many applications of function fields were found in different areas of mathematics and information theory such as coding theory sphere packings and lattices sequence design and cryptography The use of function fields often led to better results than those of classical approaches This book presents survey articles on some of these new developments Most of the material is directly related to the interaction between function fields and their various applications in particular the structure and the number of rational places of function fields are of great significance The topics focus on material which has not yet been presented in other books or survey articles Wherever applications are pointed out a special effort has been made to present some background concerning their use
