Human-computer Interaction and Management Information Systems: Foundations Ping Zhang,Dennis F. Galletta,2015-03-26 Human Computer Interaction and Management Information Systems Foundations offers state of the art research by a distinguished set of authors who span the MIS and HCI fields The original chapters provide authoritative commentaries and in depth descriptions of research programs that will guide 21st century scholars graduate students and industry professionals Human Computer Interaction or Human Factors in MIS is concerned with the ways humans interact with information technologies and tasks especially in business managerial organizational and cultural contexts It is

distinctive in many ways when compared with HCI studies in other disciplines The MIS perspective affords special importance to managerial and organizational contexts by focusing on analysis of tasks and outcomes at a level that considers organizational effectiveness With the recent advancement of technologies and development of many sophisticated applications human centeredness in MIS has become more critical than ever before This book focuses on the basics of HCI with emphasis on concepts issues theories and models that are related to understanding human tasks and the interactions among humans tasks information and technologies in organizational contexts in general Right to National Self-Defense Dimitrios Delibasis,2007-11-19 This ambitious work which took the better part of a decade to produce will be essential reading for all serious defence study students and of absorbing interest to military professionals and lay people concerned with the future of warfare and all aspects of response to military attack Its ultimate aim is to demonstrate that the advent of Cyberwarfare has pushed traditional legal thinking regarding the regulation of forcible action beyond traditional boundaries It attempts to do so by critically analyzing specific characteristics which are inherent to Cyberwarfare such as stealth speed untraceability the availability to State as well as Non State sponsored agents their defiance of traditional borders and an unprecedented potential for destruction all of which have played a major role in making obsolescent traditional legal norms relied upon for the effective regulation of the use of force It follows from the above that no defence system can be effectively regulated especially one as new and unconventional as Information Warfare unless all its specific aspects are explored as deeply as possible The best means to achieve such a purpose have been deemed to be through the inclusion as well as the careful analysis of as many real life examples of Information Warfare operations as possible in order to illustrate the special nature of Information Warfare and its various individual features The examples compiled for inclusion have been selected not on the basis of being the most recent but on the basis of their factual background being as fully known as possible Consequently this book has been constructed around the concept of legality starting with a section outlining currently existing legal norms of individual self defense then applying those norms to Information Warfare Operations including a presentation of existing international legal instruments with provisions applicable to Information Warfare which could serve as additional essential guidelines for a future legal framework specifically crafted to regulate the use of force in cyberspace Last but not least this book sets a paradigm with regard to Cyberwarfare as well as with other methods of warfare which escape the boundaries of the traditional State monopoly of the use of force It ultimately shows the extent to which traditional legal thinking which is shaped around the premise of regulating typical forms of State forcible action when faced with such methods of warfare is totally obsolete Cyber Warfare Sushil Jajodia,Paulo Shakarian,V.S. Subrahmanian,Vipin Swarup,Cliff Wang,2015-04-09 This book features a wide spectrum of the latest computer science research relating to cyber warfare including military and policy dimensions It is the first book to explore the scientific foundation of cyber warfare and features research from the areas of artificial intelligence game theory programming languages graph theory and more The

high level approach and emphasis on scientific rigor provides insights on ways to improve cyber warfare defense worldwide Cyber Warfare Building the Scientific Foundation targets researchers and practitioners working in cyber security especially government employees or contractors Advanced level students in computer science and electrical engineering with an interest in security will also find this content valuable as a secondary textbook or reference The Nature of War in the Information Age David J. Lonsdale,2004-06-01 There has been a great deal of speculation recently concerning the likely impact of the Information Age on warfare In this vein much of the Revolution in Military Affairs RMA literature subscribes to the idea that the Information Age will witness a transformation in the very nature of war In this book David Lonsdale puts that notion to the test Using a range of contexts the book sets out to look at whether the classical Clausewitzian theory of the nature of war will retain its validity in this new age The analysis covers the character of the future battlespace the function of command and the much hyped concept of Strategic Information Warfare Finally the book broadens its perspective to examine the nature of Information Power and its implications for geopolitics Through an assessment of both historical and contemporary case studies including the events following September 11 and the recent war in Iraq the author concludes that although the future will see many changes to the conduct of warfare the nature of war as given theoretical form by Clausewitz will remain essentially unchanged *Electronic Enterprise: Strategy and Architecture* Targowski, Andrew,2003-01-31 Electronic enterprise is the road map to well planned evolution of enterprise complexity with business and system strategies integration through standardized architectures of IT components This work provides a vision for IT leaders with practical solutions for IT implementation *Cyberdeterrence and Cyberwar* Martin C. Libicki,2009 The protection of cyberspace the information medium has become a vital national interest because of its importance both to the economy and to military power An attacker may tamper with networks to steal information for the money or to disrupt operations Future wars are likely to be carried out in part or perhaps entirely in cyberspace It might therefore seem obvious that maneuvering in cyberspace is like maneuvering in other media but nothing would be more misleading Cyberspace has its own laws for instance it is easy to hide identities and difficult to predict or even understand battle damage and attacks deplete themselves quickly Cyberwar is nothing so much as the manipulation of ambiguity The author explores these in detail and uses the results to address such issues as the pros and cons of counterattack the value of deterrence and vigilance and other actions the United States and the U S Air Force can take to protect itself in the face of deliberate cyberattack Publisher description *Disruptive Security Technologies with Mobile Code and Peer-to-Peer Networks* R.R. Brooks,2004-11-29 The traditional fortress mentality of system security has proven ineffective to attacks by disruptive technologies This is due largely to their reactive nature Disruptive security technologies on the other hand are proactive in their approach to attacks They allow systems to adapt to incoming threats removing many of the vulnerabilities explo Handbook of Scholarly Publications from the Air Force Institute of Technology (AFIT), Volume 1, 2000-2020 Adedeji B. Anton, Robert H. Anderson, Richard Mesic, Michael Scheiern, 2004-02-09 Understanding an organization's reliance on information systems and how to mitigate the vulnerabilities of these systems can be an intimidating challenge especially when considering less well known weaknesses or even unknown vulnerabilities that have not yet been exploited. The authors introduce the Vulnerability Assessment and Mitigation methodology a six step process that uses a top down approach to protect against future threats and system failures while mitigating current and past threats and weaknesses. **Unifying Themes in Complex Systems IV** Ali A. Minai, Yaneer Bar-Yam, 2008-11-05 In June of 2002 over 500 professors students and researchers met in Boston Massachusetts for the Fourth International Conference on Complex Systems. The attendees represented a remarkably diverse collection of fields biology ecology physics engineering computer science economics psychology and sociology. The goal of the conference was to encourage cross fertilization between the many disciplines represented and to deepen understanding of the properties common to all complex systems. This volume contains 43 papers selected from the more than 200 presented at the conference. Topics include cellular automata neurology evolution computer science network dynamics and urban planning. Technology and the Law on the Use of Force Jackson Maogoto, 2014-11-13 As governmental and non governmental operations become progressively supported by vast automated systems and electronic data flows attacks of government information infrastructure operations and processes pose a serious threat to economic and military interests In 2007 Estonia suffered a month long cyber assault to its digital infrastructure described in cyberspace as Web War I In 2010 a worm Stuxnet was identified as supervisory control and data acquisition systems at Iran s uranium enrichment plant presumably in an attempt to set back Iran s nuclear programme The dependence upon telecommunications and information infrastructures puts at risk Critical National Infrastructure and is now at the core of national security interests This book takes a detailed look at these new theatres of war and considers their relation to international law on the use of force Except in cases of self defence or with the authorisation of a Security Council Resolution the use of force is prohibited under the UN charter and customary international law However the law of jus ad bellum was developed in a pre digital era where current technological capabilities could not be conceived Jackson Maogoto asks whether the law on the use of force is able to deal with legal disputes likely to arise from modern warfare Key queries include how one defines an armed attack in an age of anti satellite weaponry whether the destruction of a State s vital digital eco system or the blinding of military communication satellites constitutes a threat and how one delimits the threshold that would enliven the right of self defence or retaliatory action The book argues that while technology has leapt ahead the legal framework has failed to adapt rendering States unable to legally defend themselves effectively The book will be of great interest and use to researchers and students of international law the law of armed conflict Information Technology and the law and counter terrorism

Globalisation and the New Terror David Martin Jones, 2004-01-28 Examines trends in new terror understood here to be the capacity of sub state actors to secure religious or politically motivated objectives by violent means Argues that while the use of violence to achieve political ends is scarcely original what distinguishes new terror is its potential for lethality Australian author

Networks and Netwars John Arquilla, David Ronfeldt, 2001-11-05 Netwar like cyberwar describes a new spectrum of conflict that is emerging in the wake of the information revolution Netwar includes conflicts waged on the one hand by terrorists criminals gangs and ethnic extremists and by civil society activists such as cyber activists or WTO protestors on the other What distinguishes netwar is the networked organizational structure of its practitioners with many groups actually being leaderless and their quickness in coming together in swarming attacks To confront this new type of conflict it is crucial for governments military and law enforcement to begin networking themselves
