- Security requirements describe all security conditions that have to be considered in the data warehouse environment.
- The first step for the definition of security requirements is to classify the security objects and security subjects of the data warehouse environment.
- security objects :classifications would be classification by sensitivity (public, confidential, top secret) or according to job functions (accounting data, personnel data)
- security subject :We can follow a top-down company view, with users classified by department , section, group, and so on. Another possible classification is role based, with people grouped across departments based on their role

Handbook of Information and Communication Security Peter Stavroulakis,Mark Stamp,2010-02-23 At its core information security deals with the secure and accurate transfer of information While information security has long been important it was perhaps brought more clearly into mainstream focus with the so called Y2K issue The Y2K scare was the fear that computer networks and the systems that are

controlled or operated by software would fail with the turn of the millennium since their clocks could lose synchronization by not recognizing a number instruction with three zeros. A positive outcome of this scare was the creation of several Computer Emergency Response Teams (CERTs) around the world that now work operatively to exchange expertise and information and to coordinate in case major problems should arise in the modern IT environment. The terrorist attacks of 11 September 2001 raised security concerns to a new level. The international community responded on at least two fronts: one front being the transfer of reliable information via secure networks and the other being the collection of information about potential terrorists. As a sign of this new emphasis on security since 2001, all major academic publishers have started technical journals focused on security and every major communications conference for example Globecom and ICC has organized workshops and sessions on security issues. In addition, the IEEE has created a technical committee on Communication and Information Security. The first editor was intimately involved with security for the Athens Olympic Games of 2004.

The Eighth Annual Working Conference of Information Security Management and Small Systems Security jointly presented by WG11.1 and WG11.2 of the International Federation for Information Processing (IFIP) focuses on various state of art concepts in the two relevant fields. The conference focuses on technical, functional as well as managerial issues. This working conference brings together researchers and practitioners of different disciplines, organisations and countries to discuss the latest developments in, amongst others, information security methods, methodologies and techniques, information security management issues, risk analysis, managing information security within electronic commerce, computer crime and intrusion detection. We are fortunate to have attracted two highly acclaimed international speakers to present invited lectures which will set the platform for the reviewed papers. Invited speakers will talk on a broad spectrum of issues all related to information security management and small system security issues. These talks cover new perspectives on electronic commerce security strategies, documentation and many more. All papers presented at this conference were reviewed by a minimum of two international reviewers. We wish to express our gratitude to all authors of papers and the international referee board. We would also like to express our appreciation to the organising committee chaired by Gurpreet Dhillon for all their inputs and arrangements. Finally, we would like to thank Les Labuschagne and Hein Venter for their contributions in compiling this proceeding for WG11.1 and WG11.2.
