Inaugural Symposium, 1988 Submarine Mass Movements and Their Consequences Vasilios Lykousis, Dimitris Sakellariou, Jacques Locat, 2007-09-14 With contributions from leading researchers in science and engineering this book provides a global perspective on submarine mass movements and their consequences Authors report on new findings from fundamental as well as site specific studies from around the world All studies relied on the most recent technologies including multi beam sonar imaging techniques 3D seismic analysis slope stability analysis debris flow and tsunami modeling

Bennett, 1998-03-06 Stratigraphy is the key to understanding the geological evolution of the earth It provides the framework for our interpretation of the sequences of events which have shaped the earth throughout its 4600 million years of existence It provides the timescale with which we can determine the relative order of these events and it provides the means whereby we can calibrate this using absolute ages in years Stratigraphy is therefore the most fundamental subject in the science of geology and all geologists are practising stratigraphers Traditionally however stratigraphy has been considered as a Victorian science a ponderous process of the naming and cataloguing of innumerable geological units most of which are of limited interest outside of a given geographical region This view has been challenged in recent years through the development of new techniques such as sequence stratigraphy cyclostratigraphy and chemostratigraphy which have greatly enhanced our capability to interpret earth history In this book many of the leading practitioners of modern stratigraphy have been gathered together to provide up to date and authoritative reviews of most of the important advances in the subject As such it is the only volume to provide a comprehensive treatment of modern stratigraphy at an advanced undergraduate level Biological Processes Associated with Impact Events Charles Cockell, Christian Koeberl, Iain Gilmour, 2006-05-18 The biological effects of asteroid and comet impacts have been widely viewed as primarily destructive The role of an impactor in the K T boundary extinctions has had a particularly important influence on thinking concerning the role of impacts in ecological and biological changes th During the 10 and final workshop of the ESF IMPACT program during March 2003 we sought to investigate the wider aspects of the involvement of impact events in biological processes including the beneficial role of these events from the prebiotic through to the ecosystem level The ESF IMPACT programme 1998 2003 was an interdisciplinary effort that is aimed at understanding impact processes and their effects on the Earth environment including environmental geological and biological changes The

IMPACT programme has 15 member states and the activities of the programme range from workshops to short courses on topics such as impact stratigraphy shock metamorphism etc The program has also awarded mobility grants and been involved in the development of teaching aids and numerous publications including this one

Gillespie, S.C. Porter, B.F. Atwater, 2003-12-17 This book reviews advances in understanding of the past ca two million years of Earth history the Quaternary Period in the United States It begins with sections on ice and water as glaciers permafrost oceans rivers lakes and aquifers Six chapters are devoted to the high latitude Pleistocene ice sheets to mountain glaciations of the western United States and to permafrost studies Other chapters discuss ice age lakes caves sea level fluctuations and riverine landscapes With a chapter on landscape evolution models the book turns to essays on geologic processes Two chapters discuss soils and their responses to climate and wind blown sediments Two more describe volcanoes and earthquakes and the use of Quaternary geology to understand the hazards they pose The next part of the book is on plants and animals Five chapters consider the Quaternary history of vegetation in the United States Other chapters treat forcing functions and vegetation response at different spatial and temporal scales the role of fire as a catalyst of vegetation change during rapid climate shifts and the use of tree rings in inferring age and past hydroclimatic conditions Three chapters address vertebrate paleontology and the extinctions of large mammals at the end of the last glaciation beetle assemblages and the inferences they permit about past conditions and the peopling of North America A final chapter addresses the numerical modeling of Quaternary climates and the role paleoclimatic studies and climatic modeling has in predicting future response of the Earth s climate system to the changes we have wrought **Characteristics of Hawaiian Volcanoes** Michael P. Latrubesse,2009-09-10 The main objective of the book is to offer a vision of the dynamics of the main disasters in South
America describing their mechanisms and consequences on South American societies The chapters are written by selected
specialists of each country Human induced disasters are also included such as desertification in Patagonia and soil erosion in
Brazil The receding of South American glaciers as a response to recent climatic trends and sea level scenarios are discussed
The approach is broad in analyzing causes and consequences and includes social and economic costs discussing
environmental and planning problems but always describing the geomorphologic geologic involved processes with a good
scientific substantiation This is important to differentiate the book from others of a more social impact that discuss risks and
disasters with emphases mainly on economy and simple impacts Actual theme interesting for a variety of professionals Fills
in the scarcity of specialized literature in geosciences from South America The first book in the market exclusively devoted to
