Seed Storage Compounds Biosynthesis Interactions And Manipulations:

Seed Storage Compounds Peter R. Shewry, A. Keith Stobart, 2023 Presents an up to date account of seed storage compounds and their structure biosynthesis and mode of deposition within the seed The book also discusses interactions and the mechanisms by which the plant may regulate the partitioning of carbon into lipid or starch *Seed Storage Compounds* Peter R. Shewry, Keith Stobart, 1993 Seeds have long been harvested as a source of protein oil starch and animal feed This edited volume brings together authoritative writings on the three groups of seed storage compounds proteins lipids and starch and offers the most up to date account of their structure biosynthesis and modes of deposition available The book also sheds light on compound interactions and on the mechanisms by which plants regulate the partitioning of carbon into lipid or starch Finally it discusses opportunities for the genetic engineering of plants either to manipulate the structures of the major seed storage compounds or to produce novel products The book which provides a synopsis of the field s exciting new developments not previously brought together in one easily accessible volume will be of interest to students and researchers of plant physiology and biochemistry *Seed Technology and Its Biological Basis* Michael Black, J. Derek Bewley, 2000 Edited by a renowned seed biologist with a team assembled from the most respected laboratories worldwide *Seed Technology and Its Biological Basis* illustrates the commercial value of seeds as a major resource The editors provide a sweeping overview of the current state of the art in seed technology and its biological basis The book is invaluable to researchers and professionals in both the industrial and academic sectors *Cellular and Molecular Biology of Plant Seed Development* Brian A. Larkins, Indra K. Vasil, 2013-03-09 The beginnings of human civilization can be traced back to the time nearly 12 000 years ago when the early humans gradually changed from a life of hunting and gathering food to producing food This beginning of primitive agriculture ensured a dependable supply of food and fostered the living together of people in groups and the development of society During this time plant seeds were recognized as a valuable source of food and nutrition and began to be used for growing plants for food Ever since plant seeds have played an important role in the development of the human civilization Even today seeds of a few crop species such as the cereals and legumes are the primary source of most human food and the predominant commodity in international agriculture Owing to their great importance as food for humans and in international trade seeds have been a favorite object of study by developmental biologists and physiologists nutritionists and chemists A wealth of useful information is available on the biology of seeds
