Earthquakes in the Mediterranean and Middle East Nicholas Ambraseys, 2009-10-22 This book examines historical evidence from the last 2000 years to analyse earthquakes in the eastern Mediterranean and Middle East Early chapters review techniques of historical seismology while the main body of the book comprises a catalogue of more than 4000 earthquakes identified from historical sources Each event is supported by textual evidence extracted from primary sources and translated into English Covering southern Rumania Greece Turkey Lebanon Israel Egypt Jordan Syria and Iraq the book documents past seismic events places them in a broad tectonic framework and provides essential information for those attempting to prepare for and mitigate the effects of future earthquakes and tsunamis in these countries This volume is an indispensable reference for researchers studying the seismic history of the eastern Mediterranean and Middle East including archaeologists historians earth scientists engineers and earthquake hazard analysts A parametric catalogue of these seismic events can be downloaded from www.cambridge.org/9780521872928

Characterization of Modern and Historical Seismic-Tsunami Events, and Their Global-Societal Impacts Y. Dilek, Y. Ogawa, Y. Okubo, 2021-06-22 Earthquakes and tsunamis are devastating geohazards with significant societal impacts Most recent occurrences have shown that their impact on the stability of nations societies and the world geopolitics is immense potentially triggering a tipping point for a major downturn in the global economy This Special Publication presents the most current information on the causes and effects of some of the modern and historical earthquake tsunami events and effective practices of risk assessment disaster management implemented by various

governments international organizations and intergovernmental agencies Findings reported here show that the magnitude of human casualties and property loss resulting from earthquakes tsunamis are highly variable around the globe and that increased community national and global resilience is significant to empower societal preparedness for such geohazards It is clear that all stakeholders including scientists policymakers governments media and world organizations must work together to disseminate accurate objective and timely information on geohazards and to develop effective legislation for risk reduction and realistic hazard mitigation management measures in our globally connected world of today

Integration of Earth Science Research on the Turkish and Greek 1999 Earthquakes Naci Görür, Gerassimos A. Papadopoulos, Nilgün Okay, 2012-12-06 In 1999 two earthquakes occurred in the Istanbul Marmara region of Turkey and the Athens Corinth region of Greece and an increased risk of further events caused great concern among the earth science community This book presents and discusses the latest results from studies of the Izmit D zce and Athens earthquakes and assesses the data that are available and relevant to the geology seismology tectonics geodesy and other fields related to earthquake studies and to evaluate earthquake hazard potential

McNeill, Erin Stewart Mauldin, 2025-02-06 A COMPANION TO GLOBAL ENVIRONMENTAL HISTORY Equips both specialists and newcomers with the historical intellectual and political context for engagement with the environment Providing multiple points of entry into a dynamic fast growing field A Companion to Global Environmental History explores the many contours of the relationship between human societies and the natural world on which they depend Bringing together essays by an international roster of both established experts and emerging scholars this volume covers a uniquely broad range of temporal geographic thematic and contextual approaches to the practice of global environmental history Thirty three detailed chapters describe how the relationship between society and nature has changed over time examine the various drivers of change and environmental transformations survey different types of environmental thought and action around the world and more Now in its second edition the Companion is fully revised to reflect major research developments and new trajectories within the field Updated chapters that present new evidence for longstanding debates and innovative applications of environmental history are accompanied by six entirely new chapters on India China Africa early modern cities global environmental governance and European environmentalism Offering fresh insights into environmental thought culture policy and politics A Companion to Global Environmental History Second Edition is an ideal textbook for undergraduate and graduate students and an invaluable reference for scholars researchers and environmental historians **Palaeoseismology** Klaus Reicherter, Alessandro M. Michetti, Pablo Gabriel Silva, 2009 Given the tremendous toll in human lives and attendant economic losses it is appropriate that scientists are working hard to understand better earthquakes with the aim of forecasting and ultimately predicting them In the last decades increasing attention has been

paid to the coseismic effects on the natural environment creating a solid base of empirical data for the estimation of source parameters of strong earthquakes based on geological observations The recently introduced INQUA scale Environmental Seismic Intensity ESI 2007 Scale of macroseismic intensity clearly shows how the systematic study of earthquake surface faulting coseismic liquefaction tsunami deposits and other primary and secondary ground effects can be integrated with traditional seismological and tectonic information to provide a better understanding of the seismicity level of an area and the associated hazards At the moment this is the only scientific means of equating the seismic records to the seismic cycle time spans extending the seismic catalogues even to tens of thousands of years improving future seismic hazard analyses This Special Publication covers some of the latest multidisciplinary work undertaken to achieve that aim Eighteen papers from research groups from all continents address a wide range of topics related both to palaeoseismological studies and assessment of macroseismic intensity based only on the natural phenomena associated with an earthquake
