Set-Valued Mappings, Selections and Topological Properties of W. M. Fleischman, 2006-11-15 **Recent Progress in General Topology III** K.P. Hart, J. van Mill, P. Simon, 2013-12-11 The book presents surveys describing recent developments in most of the primary subfields of General Topology and its applications to Algebra and Analysis during the last decade following the previous editions North Holland 1992 and 2002 The book was prepared in connection with the Prague Topological Symposium held in 2011 During the last 10 years the focus in General Topology changed and therefore the selection of topics differs from that chosen in 2002 The following areas experienced significant developments Fractals Coarse Geometry Topology Dimension Theory Set Theoretic Topology and Dynamical Systems **Continuous Selections of Multivalued Mappings** D. Repovš, P.V. Semenov, 2013-04-17 This book is dedicated to the theory of continuous selections of multi valued mappings a classical area of mathematics as far as the formulation of its fundamental problems and methods of solutions are concerned as well as a new area which has been intensively developing in recent decades and has found various applications in general topology theory of absolute retracts and infinite dimensional manifolds geometric topology fixed point theory functional and convex analysis game theory mathematical economics and other branches of modern mathematics The fundamental results in this theory were laid down in the mid 1950s by E Michael The book consists of relatively independent three parts Part A Theory Part B Results and Part C Applications We shall refer to these parts simply by their names The target audience for the first part are students of mathematics in their senior year or in their first year of graduate school who wish to get familiar with the foundations of this theory The goal of the second part is to give a comprehensive survey of the existing results on continuous selections of multivalued mappings It is intended for specialists in this area as well as for those who have mastered the material of the first part of the book In the third part we present important examples of applications of continuous selections We have chosen examples which are sufficiently interesting and have played in some sense key role in the corresponding areas of mathematics **Handbook of Topological Fixed Point Theory** Robert F. Brown, 2005-06-10 This book will be especially useful for post graduate students and researchers interested in the fixed point theory particularly in topological methods in nonlinear analysis differential equations and dynamical systems The content is also likely to stimulate the interest of mathematical economists population dynamics experts as well as theoretical physicists exploring the topological dynamics Topologies on Closed and Closed Convex Sets Gerald Beer, 1993-10-31 This monograph provides an introduction to the theory of topologies defined on the closed subsets of a metric space and on the closed convex subsets of a normed linear space as well A unifying theme is the relationship between topology and set convergence on the one hand and set functionals on the other The text includes for the first time anywhere an exposition of three topologies that over the past ten years have become fundamental tools in optimization one sided analysis convex analysis and the theory of multifunctions the Wijsman topology the Attouch Wets topology and the slice topology Particular attention is given to topologies on lower

semicontinuous functions especially lower semicontinuous convex functions as associated with their epigraphs The interplay between convex duality and topology is carefully considered and a chapter on set valued functions is included The book contains over 350 exercises and is suitable as a graduate text This book is of interest to those working in general topology set valued analysis geometric functional analysis optimization convex analysis and mathematical economics **USCO and Quasicontinuous Mappings** L'ubica Holá,Dušan Holý,Warren Moors,2021-10-25 This book presents two natural generalizations of continuous mappings namely usco and quasicontinuous mappings The first class considers set valued mappings the second class relaxes the definition of continuity Both these topological concepts stem naturally from basic mathematical considerations and have numerous applications that are covered in detail **Encyclopaedia of Mathematics** Michiel Hazewinkel,1988 V 1 A B v 2 C v 3 D Feynman Measure v 4 Fibonaccimethod H v 5 Lituus v 6 Lobachevskii Criterion for Convergence Optical Sigman Algebra v 7 Orbi t Rayleigh Equation v 8 Reaction Diffusion Equation Stirling Interpolation Formula v 9 Stochastic Approximation Zygmund Class of Functions v 10 Subject Index Author Index **Convex and Set-Valued Analysis** Aram V. Arutyunov,Valeri Obukhovskii,2016-12-05 This textbook is devoted to a compressed and self contained exposition of two important parts of contemporary mathematics convex and set valued analysis In the first part properties of convex sets the theory of separation convex functions and their differentiability properties of convex cones in finite and infinite dimensional spaces are discussed The second part covers some important parts of set valued analysis There the properties of the Hausdorff metric and various continuity concepts of set valued maps are considered The great attention is paid also to measurable set valued functions continuous Lipschitz and some special types of selections fixed point and coincidence theorems covering set valued maps topological degree theory and differential inclusions Contents Preface Part I Convex analysis Convex sets and their properties The convex hull of a set The interior of convex sets The affine hull of sets The relative interior of convex sets Separation theorems for convex sets Convex functions Closedness boundedness continuity and Lipschitz property of convex functions Conjugate functions Support functions Differentiability of convex functions and the subdifferential Convex cones A little more about convex cones in infinite dimensional spaces A problem of linear programming More about convex sets and convex hulls Part II Set valued analysis Introduction to the theory of topological and metric spaces The Hausdorff metric and the distance between sets Some fine properties of the Hausdorff metric Set valued maps Upper semicontinuous and lower semicontinuous set valued maps A base of topology of the space $H_c X$ Measurable set valued maps Measurable selections and measurable choice theorems The superposition set valued operator The Michael theorem and continuous selections Lipschitz selections Single valued approximations Special selections of set valued maps Differential inclusions Fixed points and coincidences of maps in metric spaces Stability of coincidence points and properties of covering maps Topological degree and fixed points of set valued maps in Banach spaces Existence results for differential inclusions via the fixed point method Notation Bibliography Index *Open Problems in Topology II* Elliott M.

Pearl, 2011-08-11 This volume is a collection of surveys of research problems in topology and its applications. The topics covered include general topology, set theoretic topology, continuum theory, topological algebra, dynamical systems, computational topology, and functional analysis. New surveys of research problems in topology. New perspectives on classic problems. Representative surveys of research groups from all around the world. Topological Fixed Point Theory of Multivalued Mappings

Lech Górniewicz, 2013-11-11 This book is an attempt to give a systematic presentation of results and methods which concern the fixed point theory of multivalued mappings and some of its applications. In selecting the material we have restricted ourselves to studying topological methods in the fixed point theory of multivalued mappings and applications mainly to differential inclusions. Thus in Chapter III the approximation on the graph method in fixed point theory of multivalued mappings is presented. Chapter IV is devoted to the homological methods and contains more general results, e.g. the Lefschetz Fixed Point Theorem, the fixed point index, and the topological degree theory. In Chapter V applications to some special problems in fixed point theory are formulated. Then in the last chapter a direct application to differential inclusions are presented. Note that Chapter I and Chapter II have an auxiliary character and only results connected with the Banach Contraction Principle (see Chapter II) are strictly related to topological methods in the fixed point theory. In the last section of our book (see Section 75) we give a bibliographical guide and also signal some further results which are not contained in our monograph. The author thanks several colleagues and my wife Maria who read and commented on the manuscript. These include J. Andres, A. Buraczewski, G. Gabor, A. Gorka, M. Górniewicz, S. Park, and A. Wieczorek. The author wishes to express his gratitude to P. Konstanty for preparing the electronic version of this monograph.
