Nonblocking Electronic and Photonic Switching Fabrics Wojciech Kabacinski, 2005-12-06 Switching fabrics first appeared in telephone exchanges where there was a need to interconnect many pairs of telephones installed in the network. Due to the large number of connected subscribers and inter-exchange links switching fabrics in telephone exchanges have to serve a great number of input and output ports. Because of the scale large switching fabrics were constructed from smaller ones. The way of building switching fabrics from elements of smaller capacity and different characteristics of switching fabrics topologies has been for a long time a rich area of theoretical research. The seminal work is due to C. Clos [23] who first considered multistage strict sense nonblocking switching networks and V. E. Benes [9] who first introduced the mathematical theory of switching networks. From that time many research was conducted in this field. Switching fabrics found its application not only in telecommunication starting from telephone exchanges through ATM switches and IP routers to optical cross connect systems and optical packet switches but also in other areas of knowledge like computation and control. Theory of switching fabrics becomes also a part of applied mathematics. Results of studies carried out by researchers from these areas were published in numerous papers and some books. This book is intended for people interested in the switching theory and especially combinatorial characteristics of switching networks. It contains a considerable amount of already known results. Some of them are presented in more detailed form other are only mentioned.

OpenMAX AL 1.1 Quick Reference Khronos Group, **Switching Processes in Queueing Models** Vladimir Anisimov, 2013-03-01 Switching processes invented by the author in 1977 is the main tool used in the investigation of traffic problems from automotive to telecommunications. The title provides a new approach to low traffic problems based on the analysis of flows of rare events and queueing models. In the case of fast switching averaging principle and diffusion approximation results are proved and applied to the investigation of transient phenomena for wide classes of overloading queueing networks. The book is devoted to developing the asymptotic theory for the class of switching queueing models which covers models in a Markov or semi Markov environment models under the influence of flows of external or internal perturbations unreliable and hierarchic networks etc.

Event-Triggered Control of Switched Linear Systems Jun Fu, Tai-Fang Li, 2021-04-12 This book approaches its subject matter in a way that provides Lyapunov function analysis and event triggered design methods for switched dynamic systems in terms of sampled data control hysteresis switching control and fault tolerant control. This book presents several novel design methods on event triggered control of switched linear systems in which the events inclusively consist of not only switching itself but events

occurring as the switched systems evolve The features of our approaches lie in threefold i In the framework of sampled data control a bond between the sampling period and the average dwell time of the asynchronous switched linear neutral systems is revealed with which stabilization conditions are derived for periodic sampling and event triggered sampling mechanisms respectively ii New event triggered control strategies are proposed for switched linear systems and switched delay systems including switched neutral systems The Zeno phenomenon can be excluded easily since the constant threshold can guarantee the existence of minimum positive lower bound between two continuous sampling intervals iii Two new fault tolerant control methods are presented for switched cascade systems with structural uncertainties existing in both system matrices and input matrices of the linear subsystems by using the average dwell time techniques The proposed control design works on both the switched systems with actuator faults and its nominal systems i e without actuator faults without necessarily changing any structures and or parameters of the proposed controllers This book presents several systematical analysis and design methods for event triggered control of switched systems in terms of the Lyapunov based stability It is of great significance to theoretical research and practical applications for switched systems The book provides a unified framework of sampled data control including periodic sampled data control and event triggered control and fault tolerant control of switched systems It serves as a useful book for researchers and graduate students who are interested in knowing the state of the art of analysis and synthesis of switched systems In addition it is also a useful source of up to date design methods for researchers who study switched dynamic systems and graduate students of control theory and control engineering

Discrete Event Systems, Manufacturing Systems, and Communication Networks P.R. Kumar, P.P. Varaiya, 2012-12-06 This IMA Volume in Mathematics and its Applications DISCRETE EVENT SYSTEMS MANUFACTURING SYSTEMS AND COMMUNICATION NETWORKS is based on the proceedings of a workshop that was an integral part of the 1992 93 IMA program on Control Theory The study of discrete event dynamical systems DEDS has become rapidly popular among researchers in systems and control in communication

networks in manufacturing and in distributed computing This development has created problems for researchers and potential consumers of the research The first problem is the veritable Babel of languages formalisms and approaches which makes it very difficult to determine the commonalities and distinctions among the competing schools of approaches The second related problem arises from the different traditions paradigms values and experience that scholars bring to their study of DEDS depending on whether they come from control communication computer science or mathematical logic As a result intellectual exchange among scholars becomes compromised by unexplicated assumptions The purpose of the Workshop was to promote exchange among scholars representing some of the major schools of thought in DEDS with the hope that 1 greater clarity will be achieved thereby and 2 cross fertilization will lead to more fruitful questions We thank P R Kumar and P P Varaiya for organizing the workshop and editing the proceedings We also take this opportunity to thank the National Science Foundation and the Army Research Office whose financial support made the workshop possible
