Decision Support Systems and Education John Mantas,Zdenko Sonicki,Mihaela Cri?an - Vida,Kristina Fišter,Maria Hägglund,2018-10-15 Medical informatics has revolutionized healthcare in recent years and one of the major challenges now faced by health professionals everywhere is the further improvement of healthcare by making more effective use of the data from biomedical informatics not least for education and decision support This book presents the 52 full papers accepted from 95 initial submissions delivered at the Special Topic Conference of the European Federation for Medical Informatics EFMI STC 2018 held in Zagreb Croatia on 15 and 16 October 2018 The EFMI STC is one of Europe s leading conferences for the sharing of current professional and scientific knowledge in health informatics processes and the topics covered here have been broadly divided into two sections decision support and education Offering an overview of current medical informatics research this book will undoubtedly prove invaluable for the professional development of healthcare practitioners as well as contributing to knowledge sustainability within the field of medical informatics

dHealth 2020 - Biomedical Informatics for Health and Care Günter Schreier,Dieter Hayn,2020-06-15 Successful digital healthcare depends on the effective flow of a complete chain of information from the sensor via multiple steps of processing

to the actuator which can be anything from a human healthcare professional to a robot Along this pathway methods for automating the processing of information like signal processing machine learning predictive analytics and decision support play an increasing role in providing actionable information and supporting personalized and preventive healthcare concepts in both biomedical and digital healthcare systems and applications ICT systems in healthcare and biomedical systems and devices are very closely related and in the future they will become increasingly intertwined Indeed it is already often difficult to delineate where the one ends and the other begins This book presents the intended proceedings of the dHealth 2020 annual conference on the general topic of health Informatics and digital health which was due to be held in Vienna Austria on 19 and 20 May 2020 but which was cancelled due to the COVID 19 pandemic The decision was nevertheless taken to publish these proceedings which include the 40 papers which would have been delivered at the conference The special topic for the 2020 edition of the conference was Biomedical Informatics for Health and Care The book provides an overview of current developments in health informatics and digital health and will be of interest to researchers and healthcare practitioners alike

Pathways to Illness, Pathways to Health Angele McGrady, Donald Moss, 2013-03-12 This book designed for professionals introduces a psychobiological model for understanding the paths that lead people to illness and provides recommendations for alterations of maladaptive pathways so that health is regained Research findings are incorporated to identify causal variables for illness that can be targets for change Evidence based recommendations for healthy behaviors and therapies are described Throughout the book the authors emphasize recognition of turning points on the path to illness that through informed decision making and implementation of behavioral change can be re directed to pathways to health This book presents case material to illustrate the directions that lead people to illness or to health The pathways metaphor provides an organizing force both in addressing variables contributing to illness onset and in identifying interventions to restore health This approach will guide the clinician to understanding how people become ill and the types of interventions that are appropriate for stress related illnesses The clinician will also become better informed about ways to help clients make better decisions mobilize clients survival skills and implement an interactive model of care The book includes chapters on stress related illnesses with high prevalence in today s society For each illness the genetic psychobiological etiology is explored with enough detail so that the clinician understands the best method of patient assessment and treatment One of the strengths of the book is the step wise system of interventions that are applied to the stress related illnesses Beginning with re establishment of normal daily psychobiological rhythms and continuing to evidence based state of the art interventions the professional is presented with detailed intervention plans For example the section on Applications to common illnesses metabolic disorders of behavior diabetes hypertension and hyperlipidemia considers the confluence of genetics behavior and maladaptive mind body interactions to produce the metabolic syndrome Then the personal and professional assessments are described to establish the baseline for recommending treatment while fully engaging the patient Finally multilevel

interventions are formulated for these disorders The plan begins with clinician guided self care recommendations to re establish the normal rhythm of appetite and satiety The next level of interventions consists of skill building techniques such as relaxation and imagery Lastly psychotherapy and advanced applied psychophysiological interventions are detailed Case examples are used throughout to illustrate the pathways to illness the turning points and the pathways to health From the patients viewpoints the pathways metaphor is a motivator The patient is guided to understand the paths that led to illness Subsequently the patient becomes empowered by the pathways framework to begin to make choices that lead to health
