data sources this paper looks at the size composition and management of state owned nonfinancial assets across 32 economies with particular focus on the advanced G 20 economies We find that reported nonfinancial assets comprise mostly structures such as roads and buildings and when valued land These assets have increased over time mostly due to higher property and commodity prices and are in large part owned by subnational governments Many countries have launched reforms with a view to streamlining public administrations but receipts and savings have been rather small so far Governments tend to consider relatively small sets of assets to be disposable though preferences could change in the future A potential source for future revenues could be greater reliance on user charges such as road tolls In most cases a first step for more effective asset management has to be the expansion and improvement of data compilation London Calling ,1947
