Methods in Biomedical Magnetic Resonance Imaging and Spectroscopy Ian Robert Young, 2000 These volumes are an abstraction from the Encyclopedia of Nuclear Magnetic Resonance of articles concerned with magnetic resonance imaging and spectroscopy The volumes cover imaging in all its forms and spectroscopy in as far as it relates to in vivo studies and clinical applications involving in vitro investigations of tissue The various articles which comprise these two volumes are organised into topic based sections Some of the articles appear as they were originally presented in the Encyclopedia where there is little new information and some have been more or less substantially revised in the light of what has happened since the articles were first written A number of new articles have been added where topics

have either developed from fragmentary discussions in the early 1990s or have been created ab initio since the publication of the Encyclopedia. These extensive volumes are unique in their coverage with a balance between imaging physics, spectroscopy and clinical studies. In many ways they reflect the scope covered by the major international in vivo NMR Societies with a conscious effort to allow the reader to understand all the elements that make up modern clinical magnetic resonance. Equally the topic is so huge and still evolving so fast in detail rather than concept that they can act as no more than an introduction though at quite a demanding level. The reader will appreciate the extent, nature and dynamics of human and animal magnetic resonance and will have the route map to allow them to find any further information they may need.

essentials of skeletal radiology, **Muscle Injuries in Sport Athletes** Bernard Roger, Ali Guermazi, Abdalla Skaf, 2017-01-17. This book attempts to provide a comprehensive look at all of the pathologies of muscles that are likely to be encountered in treating sports related injuries. Its purpose is to give the practitioner a guide for identifying injuries and choosing the best therapeutic strategy. The first part presents the consensus view of current knowledge, the physiology of lesions and their prognosis as well as their anatomy, clinical imaging and treatment. Then each of the muscles is described in turn with a review of anatomy, clinical examination, the results of imaging and therapeutic choices for acute and chronic injuries. A major section is dedicated to imaging with the emphasis on which diagnostic methods are best for specific injuries and how to use diagnostic imaging to determine the most suitable therapeutic strategies. Special care has been taken to provide high quality illustrations that clearly show how to identify the lesion of the damaged muscle. A wealth of illustrations, many in color, are included. Finally, the book concludes with some clinical cases and technical notes relevant to treatment of sports related muscle injuries.
