Magnetic Resonance Of Carbonaceous Solids:

Magnetic Resonance of Carbonaceous Solids Robert E. Botto, Yuzo Sanada, 1993 Magnetic Resonance of Carbonaceous Solids Robert E. Botto, Yūzō Sanada, 1993 Contributed chapters discuss the new magnetic resonance methods for characterizing carbonaceous fuels Measurements described in the text were made from the same set of Argonne Premium coal samples so different techniques can be compared with high credibility A number of nuclear magnetic resonance and electron paramagnetic resonance techniques and results are presented including solid state NMR spectroscopy and new pulsed EPR techniques Annotation copyright by Book News Inc Portland OR *Magnetic Resonance of Carbonaceous Solids; Advances in Chemistry*, 1993 Chemistry & Physics of Carbon Ljubisa R. Radovic, 2012-10-03 Written by distinguished researchers the long running Chemistry and Physics of Carbon series provides a comprehensive and critical overview of carbon materials in terms of molecular structure intermolecular relationships bulk and surface properties and their behavior in current and emerging applications Volume 31 not only retains the high qual **Solid-State Nmr of Polymers** P. Mirau, 2001 NMR spectroscopy has emerged as one of the most important methods for the solid state characterisation of polymers This report gives an overview of the methods and applications of NMR to relevant polymer problems with an emphasis on how NMR can be used for materials characterisation and to understand structure property relationships in polymers An additional indexed section containing several hundred abstracts from the Rapra Polymer Library database gives useful references for further reading *Low-Carbon Cementitious Materials with 100% Solid Wastes* Changwang Yan, Ru Bai, Ju Zhang, 2025-07-23 This book presents an innovative paradigm for synthesizing low carbon cementitious materials through 100% utilization of industrial solid wastes incorporating calcium sulphoaluminate and dicalcium silicate which simultaneously addresses the dual challenges of bulk solid waste disposal and CO₂ emission reduction in conventional cement production The subject of this book is civil engineering material and industrial solid waste management The research systematically explores the phase reconstruction mechanisms of multi component solid wastes under controlled calcination conditions hydration behavior evolution across curing ages with characterization of reaction products and pore structure development and AC impedance spectroscopy based hydration monitoring enhanced by ARIMA modeling It further investigates the regulatory effects of desulfurization gypsum on hydration kinetics and microstructure seawater activated hydration pathways yielding hardened pastes with compressive strength and machine learning driven performance prediction Engineering applications are demonstrated through optimized grouting materials exhibiting tailored flowability and interfacial bonding strength concrete formulations with early age strength development and impact resistant composites capable of absorbing energy Environmental validation via life cycle assessment confirms reduced resource and CO₂ emissions establishing a comprehensive framework for sustainable cementitious material development from waste valorization to engineered applications Given its scope the book is a valuable reference book for research students and

Composition, Geochemistry and Conversion of Oil Shales C.E. Snape, 2012-12-06 Oil shales are broadly defined as petroleum source rocks containing sufficiently high contents of organic matter above ca 10 15 wt % to make utilisation a possibility Like coal the world's reserves of oil shales are vast being many times larger than those proven for crude oil Indeed some of the largest deposits occur in the USA and Europe where Estonia and Turkey have large reserves The first recorded interest in oil shale retorting was an English patent in 1694 Eele Hancock and Porter No 330 which refers to distilling noyle from some kind of stone The oil shale retorting industry dates back to the middle of the last century notably Scotland Estonia France and Sweden in Europe Indeed my own Department at the University of Strathclyde has a historical link with James Paraffin Young the founder of the Scottish oil shale industry who endowed a chair in Applied Chemistry The growth of the oil industry saw the demise of the oil shale industry in most countries with the notable exception of Estonia where kukersite has continued to be used for power generation and retorting However oil shale utilisation has attracted renewed attention since the early 1970s as a source of transport fuels and chemical feedstocks due to the the long term uncertainties over crude oil supplies

Carbon-based Solids and Materials

Pierre Delhaes,2013-02-07 It is well known that solid carbons can be found in various guises with different forms of bulk phases graphites diamonds and carbynes as well as more molecular forms fullerenes nanotubes and graphenes resulting from recent discoveries The cause of this rich polymorphism is analyzed in the first part of this book chapters 1 5 with the propensity of carbon atoms for forming different types of homopolar chemical bonds associated with variable coordination numbers Precursor organic molecules and parent compounds are also described to establish specific links with this rich polymorphism Then in a second part chapters 6 10 a comparative review of the main classes of bulk physical properties is presented This approach emphasizes in particular the electronic behavior of pi polyaromatic systems organized in plane and curved atomic sheets Finally in a third part chapters 11 15 the surface and interface characteristics are introduced together with the texture and morphology of these multiscale carbon materials An overview of the main field of applications is related showing the large use and interest for these solids
