

Magnetic Amplifier Voltage Regulator

- Magnetic Amplifier Voltage Regulators use magnetic saturation in ferromagnetic cores to control output voltage
- They operate by adjusting core saturation with a DC control current, which determines the output voltage
- These regulators are reliable, resistant to temperature fluctuations, and immune to thermal runaway
- However, they can be slower and bulkier than other regulators and may introduce harmonic distortion
- Their durability and efficiency make them valuable in power electronics, motor controls, and even modern renewable energy systems
