Maintaining Biodiversity In Forest Ecosystems:

Maintaining Biodiversity in Forest Ecosystems Malcolm L. Hunter, 1999-06-10 Discusses the ways in which we can continue to benefit from forests while conserving their biodiversity

Maintaining Biodiversity in Forest Ecosystems Malcolm L. Hunter, 1999-06-10 The maintenance of the earth's biological diversity is widely seen as both necessary for ecosystem health and aesthetically desirable This book focuses on how biodiversity can be maintained in forested ecosystems particularly in those forests that are subject to timber harvesting At the core of the book lies the concept that diversity should be conserved in all its forms from the smallest microbes to the largest trees and at all levels of organization from genes to whole ecosystems Introductory chapters on biodiversity and ecological forestry lead on to sections dealing with management at the macro landscape and micro stand levels A concluding section addresses socioeconomic considerations that round out an overall synthesis and framework for the implementation of successful management practices Thirty three experts from ten countries contribute to this thorough and comprehensive account providing a broad based perspective that will be of interest internationally to researchers and professionals in conservation forestry and ecology

Conserving Forest Biodiversity David B. Lindenmayer, Jerry F. Franklin, 2013-04-10 While most efforts at biodiversity conservation have focused primarily on protected areas and reserves the unprotected lands surrounding those areas the matrix are equally important to preserving global biodiversity and maintaining forest health In *Conserving Forest Biodiversity* leading forest scientists David B Lindenmayer and Jerry F Franklin argue that the conservation of forest biodiversity requires a comprehensive and multiscaled approach that includes both reserve and nonreserve areas They lay the foundations for such a strategy bringing together the latest scientific information on landscape ecology forestry conservation biology and related disciplines as they examine the importance of the matrix in key areas of ecology such as metapopulation dynamics habitat fragmentation and landscape connectivity general principles for matrix management using natural disturbance regimes to guide human disturbance landscape level and stand level elements of matrix management the role of adaptive management and monitoring social dimensions and tensions in implementing matrix based forest management In addition they present five case studies that illustrate aspects and elements of applied matrix management in forests The case studies cover a wide variety of conservation planning and management issues from North America South America and Australia ranging from relatively intact forest ecosystems to an intensively managed plantation *Conserving Forest Biodiversity* presents strategies for enhancing matrix management that can play a vital role in the development of more effective approaches to maintaining forest biodiversity It examines the key issues and gives practical guidelines for sustained forest management highlighting the critical role of the matrix for scientists managers decisionmakers and other stakeholders involved in efforts to sustain biodiversity and ecosystem processes in forest landscapes

Ecosystem Services from Forest Landscapes

Ajith H. Perera,Urmas Peterson,Guillermo Martínez Pastur,Louis R. Iverson,2018-03-22 Over the last two decades the topic of forest ecosystem services has attracted the attention of researchers land managers and policy makers around the globe The services rendered by forest ecosystems range from intrinsic to anthropocentric benefits that are typically grouped as provisioning regulating supporting and cultural The research efforts assessments and attempts to manage forest ecosystems for their sustained services are now widely published in scientific literature This volume focuses on broad scale aspects of forest ecosystem services beyond individual stands to large landscapes In doing so it illustrates the conceptual and practical opportunities as well as challenges involved with planning for forest ecosystem services across landscapes regions and nations The goal here is to broaden the scope of land use planning through the adoption of a landscape scale approach Even though this approach is complex and involves multiple ecological social cultural economic and political dimensions the landscape perspective appears to offer the best opportunity for a sustained provision of forest ecosystem services *The Bioengineered Forest* Steven H. Strauss,2010-09-30 Bioengineering offers many opportunities for forestry Bioengineered trees can produce more valuable wood help reclaim contaminated land improve the health of urban trees and facilitate pest management But the ecological risks are complex and public views about the ethical acceptability of genetic engineering vary widely Unique in its breadth and diversity The Bioengineered Forest begins with a survey of the range of forestry practices for which the use of biotechnologies might be appropriate Scholars representing diverse academic perspectives and viewpoints examine in depth the economic and environmental rationale for forest biotechnologies and the current state of technology with respect to gene performance and safety They consider the contemporary political and economic environment in which bioengineering is being introduced and where the genomic revolution might take forestry and genetic engineering in the future The Bioengineered Forest presents compelling arguments in favor of genetic engineering Just as powerfully it examines the significant technical and legal hurdles involved in genetic engineering the undesirable environmental and social consequences that might result from its misapplication and the risks for businesses that are looking too exclusively for near term benefits Compatible Forest Management Robert A. Monserud,Richard W. Haynes,Adelaide C. Johnson,2013-04-17 Public debate has stimulated interest in finding greater compatibility among forest management regimes The debate has often portrayed management choices as tradeoffs between biophysical and socioeconomic components of ecosystems Here we focus on specific management strategies and emphasize broad goals such as biodiversity wood production and habitat conservation while maintaining other values from forestlands desired by the public We examine the following proposition Commodity production timber nontimber forest products and the other forest values biodiversity fish and wildlife habitat can be simultaneously produced from the same area in a socially acceptable manner Based on recent research in the Pacific Northwest we show there are alternatives for managing forest ecosystems that avoid the divisive arena of either or choices Much of the work discussed in this book addresses two aspects of the compatibility issue First how are various forest

management practices related to an array of associated goods and services Second how do different approaches to forest management affect relatively large and complex ecosystems **Assessing Forest Ecosystem Health in the Inland West**
David L. Adams, 2018-12-19 Inland West their historical origins assessments of available management tools and analyses of the various choices available to policymakers Its goal is to help people understand the Inland West forests so that public policies can reflect a constructive and realistic framework in which forests can be managed for sustained health This resource is the product of a scientific workshop where 35 participants including scientists resource managers administrators and environmentalists addressed the forest health problem in the Inland West Synthesis chapters integrate the diverse knowledge and experience which participants brought to the workshop They identify and link together many of the ecological social and administrative conditions which have created the forest health problem in the West The book is unique in that it reflects a process that fostered the use of academic research field realities and industrial knowledge to define an interdisciplinary problem establish rational policy objectives and set up do able management approaches The following topics are analyzed Assessing forest ecosystem health in the Inland West Historical and anticipated changes in forest ecosystems in the Inland West Defining and measuring forest health Historical range of variability as a tool for evaluating ecosystem change Administrative barriers to implementing forest health problems Economic and social dimensions of the forest health problem Fire management Ecosystem and landscape management **Eastside Forest Ecosystem Health Assessment:**
