Hunter-Cevera, Angela Belt, 1996-02-21 To retain their usefulness cultures that manufacture economically valuable products must be uncontaminated viable and genetically stable Maintaining Cultures for Biotechnology and Industry gives practical advice necessary to preserve and maintain cells and microorganisms important to the biotechnology and pharmaceutical industries in ways that ensure they will continue to be able to synthesize those valuable metabolites This book covers not just those strains currently being used but also those yet to be discovered and engineered This text is essential for anyone working with cultures who wants to avoid the frustration of losing strains and needs to be able to devise and evaluate new strategies for preservation Written by hands on experts in their respective fields Contains helpful tables and protocols for preserving or maintaining cells cultures and viruses Discusses means to preserve cells by freezing lyophilization drying cyoprotection spore storage continuous propagation and subculturing when absolutely necessary and others Gives information needed to test cultures for stable retention of important characteristics Gives principles needed to devise and evaluate preservation strategies for newly identified and newly engineered cells and organisms Lists culture sources for each class of organism Includes information for

characterizing and monitoring recombinant organisms especially important because of their propensity for genetic stability Discusses the history of the continually evolving field of culture preservation Examines the importance of genetically stable cultures as it relates to maintaining patent positions **Handbook of Industrial Cell Culture** Victor A. Vinci, Sarad R. Parekh, 2002-12-06 A diverse team of researchers technologists and engineers describe in simple and practical language the major current and evolving technologies for improving the biocatalytic capabilities of mammalian microbial and plant cells The authors present state of the art techniques proven methods and strategies for industrial screening cultivation and scale up of these cells and describe their biotech and industrial uses Special emphasis is given to the solving critical issues encountered during the discovery of new drugs process development and the manufacture of new and existing compounds Other topics include recombinant protein expression bioinformatics high throughput screening analytical tools in
