advancement of technologies and interdisciplinary approaches the black box the previously unforeseeable cognitive activities of how human process translation can be unfolded Considering the importance of integrating theory with practice the proceedings are therefore compiled in such a way as to be balanced and inclusive in the hope of summarizing current accomplishments as well as providing certain insights for teaching and further research in the field of translation and interpretation studies

The New Politics of Science David Dickson, 1988 How science gets done in today's world has profound political repercussions since scientific knowledge through its technical applications has become an important source of both economic and military power The increasing dependence of scientific research on funding from business and the military has made questions about the access to and control of scientific knowledge a central issue in today's politics of science In *The New Politics of Science* David Dickson points out that the scientific community has its own internal power structures its elites its hierarchies its ideologies its sanctioned norms of social behavior and its dissenting groups And the more that science as a social practice forms an integral part of the economic structures of the society in which it is imbedded the more the boundaries and differences between the two dissolve Groups inside the scientific community for example will use groups outside the community and vice versa to achieve their own political ends In this edition Dickson has included a new preface commenting on the continuing and increasing influence of industrial and defense interests on American scientific research in the 1980s

Global Inequality and American Foreign Policy in the 1970s Michael Franczak, 2022-06-15 In *Global Inequality and American Foreign Policy in the 1970s* Michael Franczak demonstrates how Third World solidarity around the New International Economic Order NIEO forced US presidents from Richard Nixon to Ronald Reagan to consolidate American hegemony over an international economic order under attack abroad and lacking support at home The goal of the nations that supported NIEO was to negotiate a redistribution of money and power from the global North to the global South Their weapon was control over the major commodities in particular oil that undergirded the prosperity of the United States and Europe after World War II Using newly available archival sources as well as interviews with key administration officials Franczak reveals how the NIEO and North South dialogue negotiations brought global inequality to the forefront of US national security The challenges posed by NIEO became an inflection point for some of the greatest economic political and moral crises of 1970s America including the end of golden age liberalism and the return of the market the splintering of the Democratic Party and the building of the Reagan coalition and the rise of human rights in US foreign policy in the wake of the Vietnam War The policy debates and decisions toward the NIEO were pivotal moments in the histories of three ideological trends neoliberalism neoconservatism and human rights that formed the core of America's post Cold War foreign policy
