Arenberg,Gregory Kalemkerian,2009-09-18 Lung cancer is the leading cause of cancer related mortality Metastatic lung
cancer is responsible for more than ninety percent of lung cancer related deaths However relatively little progress has been
made in understanding the process of lung cancer metastasis The two main aims of this book are a to introduce clinical
aspects to basic scientists and basic molecular and cellular concepts to clinical investigators in order to promote
collaboration and foster much needed translational research and b to introduce new and emerging concepts and approaches
in metastasis research to lung cancer research community at large In this attempt the book will cover a broad spectrum of
subjects ranging from the current trends in the clinical management of the metastatic disease to the systems biology
approach for gaining insights into the mechanisms of metastasis Some of the subjects covered will include defining basic
hallmarks of a metastatic cell the concept of tumor stem cells epithelial mesenchymal transitions evasion of immune
surveillance tumor stromal interactions angiogenesis molecular imaging and biomarker discovery **Carcinogenesis**
