Membrane Fluidity In Biology General Principles Vol 2:

Membrane Fluidity in Biology Roland C. Aloia, Joan M. Boggs, 2013-10-22 *Membrane Fluidity in Biology Volume 4 Cellular Aspects* provides a unique interpretation of membrane and cellular activity as well as cellular aspects of membrane fluidity. This book discusses the influence of membrane fluidity on enzyme activity, function of the sarcoplasmic reticulum in skeletal muscle, role of cholesterol in membrane function, phospholipid methylation, glycosyltransferases and membrane fusion. The realm of normal cellular function and mechanisms involved in the modulation of cellular function by membrane lipids are also elaborated in this publication. This volume is intended for cell and molecular biologists and clinical medical scientists but is also beneficial to individuals researching on the effects of membrane lipids and fluidity in cellular function.

Membrane Fluidity in Biology: General principles Roland C. Aloia, 1983 **General Principles** Ronald Aloia, 2012-12-02 *Membrane Fluidity in Biology Volume 2 General Principles* provides an introduction to the fundamental concepts of membrane fluidity. Key topics discussed include lateral phase separations and phase transitions, hydrophobic and electrostatic effects of membrane lipid-protein interactions, isothermal phase transitions and the effects of ionic factors and the influence of such components as cholesterol, phospholipids, fatty acids and cellular water on the parameters of membrane fluidity. Each of these topics is elaborated in detail to provide a unique insight into the factors influencing the thermal molecular motions of membrane components and hence cellular membrane function. Because such activities as membrane transport, enzyme kinetics and receptor function are modulated by the physical state of the membrane lipids and proteins, a thorough comprehension of the molecular aspects of membrane fluidity is necessary to evaluate the arcane aspects of membrane-related cellular activities. This book will be useful to scientists and researchers concerned with the molecular principles of cellular and organelle function. It also provides an appropriate background for *Volume 3 Cellular Aspects and Disease Processes* and for subsequent discussion of the relationship of membrane fluidity to environmental parameters, drugs, anesthetics and other exogenous agents. *Membrane Fluidity in Biology: Cellular aspects* Roland C. Aloia, 1983 *Ion*

Channel Reconstitution C. Miller, 2013-11-09 It is now over 30 years since the idea of ion-conducting pores burst on the electrophysiological scene, 15 years since these were generally realized to be membrane-spanning proteins and 10 years since the first observations of single ion channels from higher organisms were made. During the past 5 years, several integral membrane channel proteins have been purified in a functionally competent state: the nicotinic acetylcholine receptor, the Na channel, mitochondrial VDAC and a variety of porins. The stage is thus set to attack ion channels in the same ways that biochemists have been attacking enzymes for decades: isolation followed by functional analysis in as simple a system as possible with a view towards understanding the molecular mechanisms of the protein's behavior and how this is related to the underlying molecular structure. This is always a daunting task, all the more so with ion channels because of our still primitive and scanty understanding of channel structures and because of the difficulty in isolating functionally active channel proteins.

In this volume which can be considered a biochemically slanted companion to Sakmann and Neher's Single Channel Recording I have tried to present a view of the current landscape of ion channel reconstitution. These chapters illustrate not only the different approaches and techniques of the major practitioners of ion channel reconstitution but as importantly the varied motivations for doing this kind of work. *Membrane Fluidity in Biology: Disease processes* Roland C. Aloia, 1983

Membrane Structure in Disease and Drug Therapy Svante Cornell, 2000-05-10 This study asserts that cellular and intracellular membranes are active in every aspect of the body's physiology and pathophysiology. It compares secondary through to quaternary structures and protein sequences and gauges their influence on health, disease and drug therapy. The book highlights the importance of correlations, homologies and categories. **Membrane Fusion** Jan Wilschut, 2019-11-14 This balanced volume provides a broad and coherent overview of recent progress in membrane fusion research, highlighting an interdisciplinary treatment of the subject from the fields of biophysics, biochemistry, cell biology, virology and biotechnology in a single volume. Featuring easy access sections on the general properties of membranes and applications of membrane fusion techniques, this valuable sourcebook outlines membrane structure, lipid polymorphism and intermembrane forces, covers membrane fusion in model systems, presents the fusogenic properties of enveloped viruses, discusses the fusion and flow of intracellular membranes and cell-cell fusion occurring during fertilization and myogenesis, offers applications of membrane fusion techniques in cell biological research and biotechnology and more. Supplying a comprehensive view of this exciting topic, *Membrane Fusion* is a working resource for molecular cell and membrane biologists, biophysicists, biochemists, virologists, biotechnologists, microbiologists, immunologists, physiologists and graduate and medical school students in biophysics, biochemistry, physiology, virology, cell biology and biotechnology. **Bone and Mineral Research** Johan N.M. Heersche, J. A. Kanis, 1990-12-14 *Bone and Mineral Research* Cell Fusion A.E. Sowers, 2013-11-11 Over the last decade the volume *Membrane Fusion* edited by Poste and Nicholson has probably served as one of the major sources of review information on fusion in membrane systems. Since its publication much new information has been collected. New methods of inducing fusion have been invented or discovered and new applications for fusion have been found. The need for an up to date monograph that covers and integrates these subjects, reviews established material and rationalizes and integrates the old and the new is thus obvious. This book is the product of efforts to meet this need. Most of the current work in the field of membrane fusion takes place within the context of intact or modified cells. Hence this book emphasizes the plasma membrane. Each chapter is either a review, a report or a short historical overview depending respectively on whether the subject is large in scope and has a long history or the subject is in such an early stage of development that most of what is known is still in the hands of a relatively small number of investigators and is best covered in report form. *Dokumentation Rheologie*, 1984

Dynamic Aspects of Cell Surface Organization George Poste, Garth L. Nicolson, 2013-10-22 *Cell Surface Reviews* Volume 3 *Dynamic Aspects of Cell Surface Organization* reviews the progress in the study of the dynamic nature of

membrane organization The book is comprised of 14 chapters that discuss the various areas of concerns relating to membrane dynamics The coverage of the text includes techniques and methods employed in the analysis and manipulation of the various aspects of cell membranes such as freeze fracture techniques manipulation of the lipid composition of cultured animal cells and somatic genetic analysis The book also talks about some of the traits and behaviors of membrane dynamics including shedding of tumor cell surface antigens dynamics of antibody binding and complement interactions at the cell surface and structure and function of surface immunoglobulin of lymphocytes The text will be of great use to microbiologists biochemists and other researchers whose work requires a good understanding of the various aspects of cells

Medical and Health Care Books and Serials in Print ,1997 **Biomembranes** Robert B. Gennis,2013-04-17 New textbooks at all levels of chemistry appear with great regularity Some fields like basic biochemistry organic reaction mechanisms and chemical thermodynamics are well represented by many excellent texts and new or revised editions are published sufficiently often to keep up with progress in research However some areas of chemistry especially many of those taught at the graduate level suffer from a real lack of up to date textbooks The most serious needs occur in fields that are rapidly changing Textbooks in these subjects usually have to be written by scientists actually involved in the research which is advancing the field It is not often easy to persuade such individuals to set time aside to help spread the knowledge they have accumulated Our goal in this series is to pinpoint areas of chemistry where recent progress has outpaced what is covered in any available textbooks and then seek out and persuade experts in these fields to produce relatively concise but instructive introductions to their fields These should serve the needs of one semester or one quarter graduate courses in chemistry and biochemistry In some cases the availability of texts in active research areas should help stimulate the creation of new courses
