Membrane Fusion Leonid V. Chernomordik, Leonid Vital'evich Chernomordik, Michael M. Kozlov, 2011-07-27 This volume of Current Topics in Membranes focuses on Membrane Fusion beginning with fusion and fission of lipid bilayers with reviews focused on hemifusion and dynamic remodeling of membranes catalyzed by dynamin Other topics discussed include viral fusion intracellular fusion developmental cell fusion and theoretical modeling **Membrane Fusion Techniques** Nejat Düzgüneş, 1993 The critically acclaimed laboratory standard Methods in Enzymology is one of the most highly respected publications in the field of biochemistry Since 1955 each volume has been eagerly awaited frequently consulted

and praised by researchers and reviewers alike The series contains much material still relevant today truly an essential publication for researchers in all fields of life sciences Major topics covered include Cell cell fusion mediated by viruses and viral proteins Conformational changes of proteins during membrane fusion Membrane fusion during exocytosis Intracellular membrane fusion Membrane fusion in fertilization Introduction of macromolecules into cells by membrane fusion Protoplast fusion

Molecular Mechanisms of Membrane Fusion Shinpei Ohki, 2012-12-06 Membrane fusion is an important molecular event which plays a pivotal role in many dynamic cellular processes such as exocytosis endocytosis membrane biogenesis fertilization etc While many reports on the physico chemical process involved in membrane fusion have appeared in the literature and much information has accumulated there has been no comprehensive meeting of workers in the field A recent symposium which took place at the Center for Tomorrow State University of New York at Buffalo New York April 27 29 1987 was the first meeting of its kind to specifically address the molecular mechanisms of membrane fusion The Symposium consisted of oral workshop and poster presentation sessions The papers presented in the oral and workshop sessions are collected here and arranged approximately in the order presented at the Symposium These papers are the most up to date and representative work at the front of each aspect of membrane fusion Although the readers may find some differences in interpretations regarding the molecular mechanisms of membrane fusion there is an overall consensus that increased hydrophobicity and dehydration of the membrane surface are essential physico chemical factors for membrane fusion to occur We trust that these papers will contribute to your further understanding of the mechanisms of membrane fusion

Mobility and Proximity in Biological Membranes Sandor Damjanovich, Michael Edidin, Janos Szollosi, Lajos Tron, 1994-03-03 Cell surface membranes have long been characterized as two dimensional fluids whose mobile components are randomized by diffusion in the plane of the membrane bilayer Recent research has indicated that cell surface membranes are highly organized and ordered and that important functional units of membranes appear as arrays of interacting molecules rather than as single freely diffusing molecules Mobility and Proximity in Biological Membranes provides an overview of the results obtained from biophysical methods for probing the organization of cell surface membranes These results are presented in the context of detailed treatments of the theory and the technical demands of each of the methods The book describes a versatile and easily applied mode for investigating molecular proximities in plasma membranes in a flow cytometer Its analysis of lipid fluidity and viscosity of membranes and the rotational mobility of proteins offers intimate insight into the physical chemistry of biological membranes The electrophysiology of lymphocytes is presented with focus on its importance in different diseases New techniques are described and new data new possibilities and future trends are presented by world experts This book s

chapters can serve both as guides to the existing literature and as starting points for new experiments and approaches associated with problems in membrane function Electroporation and Electrofusion in Cell Biology C.A. Jordan,E. Neumann,A.E. Sowers,1989-05-31 Cells can be funny Try to grow them with a slightly wrong recipe and they turn over and die But hit them with an electric field strong enough to knock over a horse and they do enough things to justify international meetings to fill a sizable book and to lead one to speak of an entirely new technology for cell manipulation The very improbability of these events not only raises questions about why things happen but also leads to a long list of practical systems in which the application of strong electric fields might enable the merger of cell contents or the introduction of alien but vital material Inevitably the basic questions and the practical applications will not keep in step The questions are intrinsically tough It is hard enough to analyze the action of the relatively weak fields that rotate or align cells but it is nearly impossible to predict responses to the cell shredding bursts of electricity that cause them to fuse or to open up to very large molecular assemblies Even so theoretical studies and systematic examination of model systems have produced some creditable results ideas which should ultimately provide hints of what to try next *Lipid Polymorphism and Membrane Properties* ,1997-10-02 The major lipid components of biological membranes can undergo many diverse and fascinating morphological rearrangements Studies of these diverse phases and the manner in which they are formed tends to alter the properties of ordinary bilayer membranes This book examines the structural and biological roles of lipids forming non lamellar structures Key Features Characterization of non lamellar structures Protein activity and membrane properties Analysis of membrane fusion Affect of non lamellar forming lipids on biological systems **Molecular Biology of Membranes** H.R. Petty,1993-05-31 This well organized user friendly and profusely illustrated work fills the need for an up to date textbook on the structure and function of biological membranes In addition to the traditional topics covered in membrane biology courses it discusses recent findings provided by cDNA cloning and X ray diffraction to furnish the advanced undergraduate and graduate student with the most current practical classroom resource available Liposomes as Tools in Basic Research and Industry (1994) Jean R. Philippot,Francis Schuber,2017-11-22 This book is devoted to a broader understanding of liposomes as a versatile tool used in many domains including basic research and applied technology focusing on less common applications and recent developments Over the past few years new types of liposomes made of nonphospholipid molecules have opened new perspectives in applications These lipid vesicles already used in cosmetology are being manufactured for industrial and agricultural uses However Stealth liposomes pH sensitive liposomes and cationic liposomes have enlarged and improved the application field of liposomes in clinical research The book covers these different uses of liposomes with particular attention to new formulations and new applications **Effects of Membrane Lipids on Protein Function** Rutilio A. Fratti,Roberto Botelho,Steven Del Signore,Avital Adah Rodal,2021-06-30 **Protein Modules in Cellular Signalling** Ludwig Heilmeyer,Ludwig M. G. Heilmeyer,Peter Friedrich,2001 Dynamic

stability of cells is a function of co ordination and counterbalance between intracellular signalling events Therefore the knowledge of those molecules which form signalling cascades or signalling modules is of prime importance in understanding living processes Signalling proteins the component members of different cascades are the focus of intense interest Protein phosphorylation dephosphorylation is the prevalent mechanism by which signalling molecules transduce their signals The Structure of Biological Membranes Philip L. Yeagle, 2004-06-28 Recent research has provided an abundance of new information on membrane biochemistry Now more than ever it is essential to update our current understanding of membrane structure and function to fully appreciate and apply these findings Completely revised and updated to reflect advances in the field The Structure of Biological Membranes Recent Progress in Bunyavirus Research Jane Tao, Pierre-Yves Lozach, 2018-07-10 This book is a printed edition of the Special Issue Recent Progress in Bunyavirus Research that was published in Viruses Characterization of Biological Membranes Mu-Ping Nieh, Frederick A. Heberle, John Katsaras, 2019-07-22 The study of membranes has become of high importance in the fields of biology pharmaceutical chemistry and medicine since much of what happens in a cell or in a virus involves biological membranes The current book is an excellent introduction to the area which explains how modern analytical methods can be applied to study biological membranes and membrane proteins and the bioprocesses they are involved to **Current Topics in Membranes and Transport**, 1987-07-09 **Current Topics in Membranes and Transport** **Strategies for Teaching in the XXI Century** Fernando J. Garrigos-Simon, Ignacio Gil-Pechuan, Carlos Rueda-Armengot, 2015-10-13 This book presents a range of teaching methodologies and skills assessments conceived as fundamental tools for teaching and learning in the 21st century In addition it explores how novel teaching platforms may be used to improve communication and how emerging software can enable the acquisition and horizontal transfer of knowledge and self study Bringing together the latest trends in educational innovation and experiences and cases of educational innovation the book will encourage progress and innovation in learning and applied technological tools As such it will have a significant impact on the education system not only at the undergraduate and postgraduate levels but also in primary and secondary education as well as in the ongoing training of business personnel which offers a response to the demands of the environment Through its 19 chapters this volume investigates a variety of models of teaching and learning that purport to provide students with the tools and skills necessary for success in a highly competitive rapidly evolving global labour market where linguistic proficiency is increasingly important The book s scope runs from primary education to compulsory education and finally higher education
