The atlas features a state of the art magnetic resonance imaging series, histological specimens, Darrow, Red, and Campbell staining, and a plastinate-based topographical part which allows direct comparison of histological and topographical findings with neuroimaging. In addition, the reader is guided along the brainstem neuromer model through the human brainstem and learns about the functional properties of the individual structures of the brainstem. Where appropriate, peripheral targets of brainstem structures are illustrated and explained. Furthermore, each chapter covers the most important neurological disorders affecting the brainstem.
