**Lipase and Phospholipase Protocols** Mark Doolittle, 2008-02-02 The lipases and phospholipases represent a diverse group of enzymes that are expressed in animals plants fungi and bacteria Their ubiquitous distribution among all species is a testament to the essential roles played by these enzymes in lipid storage mobilization and metabolism membrane homeostasis and remodeling endocrine and immune functions and signal transduction In humans lipases and phospholipases are also thought to contribute to complex diseases such as atherosclerosis obesity arthritis and cancer as well as to single gene defects such as Wolman's disease and Type I hyperlipoproteinemia Enzymatically the lipases are unique since they hydrolyze substrates that are either insoluble or only partly soluble in aqueous solvents thus enzyme catalysis takes place at a lipid water interface The interface comprises at least two and often more discrete bulk and surface phases in which the enzyme substrate and products of lipolysis disperse among these phases based on their physical properties Furthermore the distribution of these components changes continuously as lipolysis proceeds Thus the lipases and phospholipases are fundamentally different from any other enzyme because of the physical complexity of the environment in which catalysis occurs □□□□□□, 1971

**Antiviral Methods and Protocols** Derek Kinchington, Raymond F. Schinazi, 2008-02-01 This latest addition to the Methods in Molecular Medicine series Antiviral Methods and Protocols is opportune because there is an increasing interest in discovering compounds that are effective against both chronic and acute viral infections A number of the methods described in the volume are unpublished and their inclusion indicates the speed at which this field is moving This volume is not a review but each chapter contains methods validated by the experts who have spent time in developing the protocols The hallmark of this series is the comprehensive way in which the methods are described which includes a list of all the reagents needed for each protocol Of importance is the section on tips and pitfalls that the authors have discovered while developing their protocols The manual itself is designed to be used by researchers in universities and industry who are familiar with a range of biological techniques but who want to set up quickly a novel assay system We encourage a dialog between readers and authors which may also result in useful collaborations Special Libraries, 1960 Vols for 1980 include Annual directory issue

*Laboratory Techniques in Thrombosis — a Manual* J. Jespersen, R.M. Bertina, F. Haverkate, 2013-12-01

The first edition of this manual appeared in 1992 and was entitled ECAT Assay Procedures It was the result of a unique cooperation between experts brought together by the European Concerted Action on Thrombosis and Disabilities ECAT The Concerted Action was at that time under the auspices of the Commission of the European Union The second edition like the first edition deals with diagnostic tests within the field of thrombosis However the second edition has a broader scope because it is no longer limited by the frontiers of ECAT Experts all over the world in and outside ECAT have contributed to this edition The editors are very grateful for their contributions The need for a new edition is obvious Since 1992 new assays have been introduced for research diagnosis and therapy of thrombosis for other assays improvements have been suggested while a few others became redundant The editors waived the radioimmunoassays of thromboglobulin and platelet factor 4 due to the fact that the kits required for these assays are rarely or no longer available Also the PAI 1 activity assay was waived as it is liable to many inconsistencies and to large variations A list of names and addresses of manufacturers marketing the kits and reagents has been compiled together with a list of the recommended nomenclature of quantities in thrombosis and haemostasis in order to facilitate the use of the updated version These lists have been carefully compiled by Johannes J Sidelmann PhD Department of Clinical Biochemistry in Esbjerg Denmark      Cellulases Harry Gilbert, 2012-05-29 Cellulase refers to a class of enzymes produced chiefly by fungi bacteria and protozoans that catalyse cellulolysis This volume covers subjects such as the DNSA reducing assay for measuring cellulases measuring processivity and in situ cellulose detection with carbohydrate binding modules      **RNA Processing** Steve J. Higgins, B. D. Hames, 1994 This two volume set provides detailed practical guidance on all major aspects of RNA processing Each procedure is clearly explained so that the reader can follow all of the key stages of a successful experimental investigation      **An Analysis of the Dynamics of DDT in Marine Sediments** John H. Phillips, Eugene Haderlie, Welton L. Lee, 1975      **The Enzyme Reference** Daniel L. Purich, R. Donald Allison, 2003-01-04 The aim of this work is to provide a fuller spectrum of information in a single source on enzyme catalyzed reactions than is currently available in any published reference work or as part of any Internet database The Enzyme Reference A Comprehensive Guidebook to Enzyme Nomenclature Reactions and Methods includes 20 000 review articles and seminal research papers Additionally it provides a novel treatment of so called ATPase and GTPase reactions to account for the noncovalent substrate-like and product-like states of molecular motors elongation factors transporters DNA helicases G regulatory proteins and other energases Includes a compendium of over 6 000 enzyme reactions including enzyme commission numbers alternative names substrates products alternative substrates and properties Covers over 900 chemical structures of key metabolites and cofactors Index directs readers to the exact pages for over 9 500 enzyme names

*Optimization in Drug Discovery* Zhengyin Yan, Gary W. Caldwell, 2008-02-06 Recent analyses of drug attrition rates reveal that a significant number of drug candidates fail in the later stage of clinical development owing to absorption distribution metabolism elimination ADME and toxicity issues Lead optimization in drug discovery a process attempting to uncover and

correct these defects of drug candidates is highly beneficial in lowering the cost and time to develop therapeutic drugs by reducing drug candidate failures in development. At present parallel synthesis combining with high throughput screening has made it easier to generate highly potent compounds i.e. hits. However to be a potential drug a hit must have drug like characteristics in addition to potency which include optimal physicochemical properties reasonable pharmacokinetic parameters and good safety profiles. Therefore research tools must be available in drug discovery to rapidly screen for compounds with favorable drug like properties and thus adequate resources can be directed to projects with high potential.

**Optimization in Drug Discovery In Vitro Methods** is a compilation of detailed experimental protocols necessary for setting up a variety of assays important in compound evaluation. A total of 25 chapters contributed by many experts in their research areas cover a wide spectrum of subjects including physicochemical properties absorption plasma binding metabolism drug interactions and toxicity. A good pharmacokinetic profile has long been recognized as an important drug like characteristic. Pharmacokinetic parameters are affected by many properties of drug molecules such as physicochemical nature absorption metabolic stability and so on.

**Handbook of Surface and Interface Analysis** John C. Riviere, Sverre Myhra, 1998-01-27

Integrating advances in instrumentation and methods this work offers an approach to solving problems in surface and interface analysis beginning with a particular problem and then explaining the most rational and efficient route to a solution. The book discusses electron optical and scanned probe microscopy high spatial resolution imaging and synchrotron based techniques. It emphasizes problem solving for different classes of materials and material function.

*Biotechnology in Pulp and Paper Manufacture Applications and Fundamental Investigations* documents the proceedings of the Fourth International Conference on Biotechnology in the Pulp and Paper Industry held in Raleigh NC and Myrtle Beach SC on 16-19 May 1989. This volume contains 68 selected papers organized into seven parts. Part I deals with cell wall degradation and biopulping. It includes papers such as energy savings in biomechanical pumping and biological degradation and delignification of rice straw. Part II on the enzyme and fungal treatment of pulps presents studies on the improvement of pulp properties by treatment with enzymes or with whole cells. Part III reports on research on new biological treatments for wastewaters produced by the pulp and paper industry. Part IV discusses the conversion of pulping and papermaking byproducts to more valuable products via fermentation. Parts V and VI are devoted to fundamental studies on lignin biodegradation and on cellulose and hemicellulose biodegradation respectively. Part VII focuses on molecular genetics research on lignocelluloses degrading microorganisms.
