## Abstract

With the development of nuclear power, nuclear power plant safety and emergency management work has aroused great concern of society. Addressing nuclear power plant accidents (NPPAs) overwhelms the capability of single jurisdictional government and spans the boundaries of multiple sectors. However, there is still a lack of research on the antecedent condition, the process mechanism, the basic elements and components of the cross-organization collaboration in the field of NPPAs emergency management in off-site area. On the basis of the initial theory, basic elements and constituent elements of cross-organization collaboration, this article will define the cross-organization collaboration process as a system process interacted with the environment, which consists of four basic elements of collaborative condition, collaborative process, collaborative structure, and collaborative output. Based on the description and analysis of the case of S City, with the explanation of the basic element, the constituent elements and the collaboration mechanisms, this article proposes a cross-organization collaboration framework including collaborative antecedents, collaborative process, collaborative structure, collaborative governance and collaborative outcome of NPPAs emergency management in off-site area.

**Rediscovering Geography** National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Rediscovering Geography Committee, 1997-03-28 As political economic and environmental issues increasingly spread across the globe the science of geography is being rediscovered by scientists policymakers and educators alike Geography has been made a core subject in U S schools and scientists from a variety of disciplines are using analytical tools originally developed by geographers Rediscovering Geography presents a broad overview of geography s renewed importance in a changing world Through discussions and highlighted case studies this book illustrates geography s impact on international trade environmental change population

growth information infrastructure the condition of cities the spread of AIDS and much more The committee examines some of the more significant tools for data collection storage analysis and display with examples of major contributions made by geographers Rediscovering Geography provides a blueprint for the future of the discipline recommending how to strengthen its intellectual and institutional foundation and meet the demand for geographic expertise among professionals and the public

Behavior and Environment T. Garling, R.G. Golledge, 1993-01-28 Active researchers in the areas of geography and psychology have contributed to this book Both fields are capable of increasing our scientific knowledge of how human behavior is interfaced with the molar physical environment Such knowledge is essential for the solution of many of today's most urgent environmental problems Failure to constrain use of scarce resources pollution due to human activities creation of technological hazards and deteriorating urban quality due to vandalism and crime are all well known examples The influence of psychology in geographical research has long been appreciated but it is only recently that psychologists have recognized they have something to learn from geography In identifying the importance of two way interdisciplinary communication a psychologist and a geographer have been invited to each write a chapter in this book on a designated topic so that close comparisons can be drawn as to how the two disciplines approach the same difficulties Since the disciplines are to some extent complementary it is hoped that this close collaboration will have synergistic effects on the attempts of both to find solutions to environmental problems through an increased understanding of the many behavior environment interfaces
