what set of games is it advisable to encourage Obviously it is advisable to encourage playing some groups of games such as trade as well as to discourage playing other groups of games such as wars This shift makes the theory much more applicable to social science usually choosing what game to play is less practical than choosing what game not to play This invites legislation and similar incentives their study should aim at the improvement of their usefulness Discussing the possibility of changing both game and strategy renders game theory part and parcel of social science For this mathematical models will not do it requires a clear distinction between describing options and explaining situations Explanations may enhance efforts at improvement
