Beckett,2012-12-06 Food processing is now the biggest industry in the UK and in many other countries It is also rapidly changing from what was essentially a craft industry batch processing relatively small amounts of product to a very highly automated one with continuously operating high speed production lines In addition consumers have developed a greater expectation for

consistently high standard products and coupled this with demands for such things as a more natural flavour lower fat etc The need for an increased knowledge of the scientific principles behind food processing has never been greater Within the industry itself increased automation company diversification and amalgamations etc have meant that those working in it have often to change their field of operation Whereas twenty years ago someone starting work in one branch of the food industry could expect if he or she so desired to work there all their working lives this is now seldom the case This means that a basic knowledge of the principles behind food processing is necessary both for the student at university or college and for those already in the industry It is hoped therefore that this book will appeal to both and prove to be a useful reference over a wide range of food processing

Microbial Exopolysaccharides: From Genes to Applications Jochen Schmid, Julia Fariña, Bernd Rehm, Volker Sieber, 2016-06-24 Microbial polysaccharides represent an attractive alternative to those from plants or macro algae They can be produced from renewable sources including lignocellulosic waste streams Their production does not depend on geographical constraints and or seasonal limitations Additionally the manipulation of biosynthetic pathways to enhance productivity or to influence the chemical polysaccharide composition is comparatively easy in bacteria Microbial exopolysaccharides represents a valuable resource of biogenic and biodegradable polymers suitable to replace petro based polymers in various technical applications Furthermore biocompatible exopolysaccharides are very attractive in medical applications such as drug delivery systems use as vaccines or nanoparticles This research topic will depict the status quo as well as the future needs in the field of EPS and biofilm research Starting from the unexplored diversity of microbial polysaccharide producers to production processes and possibilities for modifications to enhance the already high number of functionalities based on the chemical structures An overview of the recent and future applications will be given and the necessity in unravelling the biosynthesis of microbial exopolysaccharide producers is depicted highlighting the future trend of tailor made polymers Constraints in structure analysis of these highly complex biogenic polymers are described and different approaches to solve the restrictions in imaging and NMR analysis will be given Therefore this research topic comprises the whole process from genes to applications
