Preservation Of Surfactant Formulations:

Preservation of Surfactant Formulations F. Morpeth, 2012-12-06 Microbes are known to live in an enormous range of environments. Their ability to survive and proliferate in diverse industrial systems is often a surprise to those not exposed to these problems in their work. These systems contain a range of potential carbon sources, one common theme being surfactants. Surfactants are often not the components most prone to spoilage since some systems contain highly susceptible natural components such as starch and xanthan gum, but the surfactant is a key part of the formulation and its extensive breakdown usually means that the material is beyond recovery. The aim of this book is to describe in detail all aspects of the preservation of surfactant-containing materials. The book should be viewed as being in three discrete sections: chapters 1-5 deal with and summarise essential background information; chapters 6-11 discuss in detail various end use applications; chapters 12-15 outline the regulatory and toxicology implications associated with the safe handling of preservatives. Given the format of the book, there is inevitably some duplication of information in the middle section with different authors describing essentially the same phenomena but on different substrates. I hope the reader will find that although different chapters touch on the same topics, the information around these areas is sufficiently different to justify their inclusion in this book and to be of interest. It should also demonstrate what can be the most useful source of information: the hard practical experience of the authors.

Directory of Microbicides for the Protection of Materials Wilfried Paulus, 2005-01-17 This two-part book combines the insights of world experts on Microbicides with a detailed inventory of Microbicide Data. The combination of the two parts in one book is unique and has produced the most authoritative information in the field.

Chemistry and Technology of Agrochemical Formulations A. Knowles, 2012-12-06 Agrochemical products and adjuvants are of vital importance in agriculture to protect food and fibre crops from weeds, insect pests, and diseases in order to feed and clothe the growing world population. In recent years, there have been increasing pressures to produce agrochemical formulations which have a lower environmental impact and are safer in use. Enormous changes have taken place in the chemistry and technology of agrochemicals over the last twenty years or so, and this book provides a timely review of the most important area of technology in the development of new products. This book covers issues around international product quality and safety standards and describes the current and likely future trends which will carry the industry forward into the next millennium. It brings together well-known international experts with many years of practical

experience from agrochemical companies consultancies academic institutions and regulatory bodies Chemists and technologists involved in developing new or improved agrochemical formulations will find this book an essential reference in the course of their work The book will also be of interest to those working in research and development departments of raw material suppliers as a concise review of this important field
