Authenticity and Wooden Architecture Preservation in Asia - a Chinese perspective Tomasz

Tomaszek, 2022-11-11 The tradition of Chinese wooden architecture dates back to ancient times The construction solutions developed in this country over the centuries enchant with their refined character while the historical wooden structures delight future generations with their dignity and aesthetic excellence China's wooden architecture deeply rooted in its spiritual and religious traditions is undoubtedly the pinnacle of this type of building in Asian culture At the same time it is a testimony to the national identity and reflects the specificity of the country's material heritage The accelerated social and economic changes in China and the constantly advancing globalization of the world have contributed to this country's assimilation of Western concepts related to the protection of cultural heritage The issue of authenticity in the preservation of wooden built heritage proved particularly problematic This book brings closer the theoretical understanding and practical application of the idea of authenticity from Chinese perspective To do this the issue of living heritage and the reception and

understanding of traditional Chinese wooden architecture and its preservation as a direct materialization of Chinese religious and philosophical traditions is discussed The above topics are treated within the cyclic concept of time i e in terms of progress and repetition with preservation being understood as a religious practice Finally trends in the preservation of wooden heritage in present day China are mentioned including new attempts to interpret the tradition and the reinvention of the tradition of wooden building The book aims to contribute to the understanding of the protection of wooden architectural heritage in China from a new perspective and will be of particular interest to academics and professionals interested in or involved in the preservation of built wooden heritage a highly valuable contribution to the field of wooden architecture protection and preservation Xiaoming Zhu Tongji University Shanghai China This book successfully explains the inheritance characteristics of Chinese wooden architectures from the perspective of cultural philosophy for a wide audience Yasufumi Uekita University of Tsukuba Ibaraki Japan

Museums and Archaeology Robin Skeates, 2022-06-19 Museums and Archaeology brings together a wide but carefully chosen selection of literature from around the world that connects museums and archaeology Part of the successful Leicester Readers in Museum Studies series it provides a combination of issue and practice based perspectives As such it is a volume not only for students and researchers from a range of disciplines interested in museum gallery and heritage studies including public archaeology and cultural resource management CRM but also the wide range of professionals and volunteers in the museum and heritage sector who work with archaeological collections The volume s balance of theory and practice and its thematic and geographical breadth is explored and explained in an extended introduction which situates the readings in the context of the extensive literature on museum archaeology highlighting the many tensions that exist between idealistic principles and real life practice and the debates that surround these In addition to this section introductions and the seminal pieces themselves provide a comprehensive and contextualised resource on the interplay of museums and archaeology

Stone in Architecture Siegfried Siegesmund, Rolf Snethlage, 2011-01-25 The weathering of historical buildings and indeed of monuments and sculptures of natural stone is a problem that has been encountered for hundreds of years However a dramatic increase in deterioration in the structure of

our built heritage has been observed during the past century To understand the complex interaction that the stone in a building suffers with its near environment the building and the macro environment the local climate and atmospheric conditions requires an interdisciplinary approach and the application of many disciplines Climate change over the next 100 years is likely to have a range of direct and indirect impacts on many natural and physical environments including the built environment The protection of our architectural heritage has both cultural and historical importance as well as substantial economic and ecological value Large sums of money are being spent world wide on measures for the preservation of monuments and historical buildings The past few decades has seen an unprecedented level of research activity in this area the results of which are often difficult to access and are summarized in the new edition of STONE IN ARCHITECTURE

Biodeterioration Research 1 Gerald C. Llewellyn, Charles E. O'Rear, 2012-12-06 Man made textile fibers are frequently encountered as trace evidence in criminal investigations This study examined the effects of burial in soil on the biodeterioration of synthetic textile fibers such as cellulose acetate nylon polyesters and acrylics Cellulose acetate fibers began to show signs of decomposition within two months after burial in common garden topsoil and were completely degraded within four to nine months It was found that severely decomposed cellulose acetate fibers could be identified by pyrolysis gas liquid chromatography even when other methods such as polarized light microscopy and dispersion staining failed The solubility behavior of the cellulose acetate fibers also was altered The other types of fibers showed no detectable alteration at the end of the twelve month study REFERENCES American Association of Textile Chemists and Colorists 1971 AATCC Technical Manual AATCC Triangle Park NC Cook R and Paterson M D 1978 New techniques for the identification of microscopic samples of textile fibers by infrared spectroscopy Forensic Sci Int 12 237 243 DeForest P R Geanssen R E and Lee H C 1983 Forensic Science An Introduction to Criminalistics McGraw Hill Book Company NY Federal Bureau of Investigation 1978 Solubility schemes by generic class Federal Bureau of Investigation Washington DC Fong W 1982 Rapid microscopic identification of synthetic fibers in a single liquid mount Forensic Sci 27 257 263 History of Architectural Conservation Jukka Jokilehto, 2007-06-07 A History of Architectural Conservation expands knowledge about the conservation of ancient monuments works of art and historic buildings It includes the origins of the interest in conservation within the European context and the development of the concepts from Antiquity and the Renaissance to the present day Jokilehto illustrates how this development has influenced international collaboration in the protection and conservation of cultural heritage and how it has formed the principal concepts and approach to conservation and restoration in today's multi cultural society This book is based on archival research of original documents and the study of key restoration examples in countries that have influenced the international conservation movement Accessible and of great interest to students and the general public it includes conservation trends in Europe the USA India Iran and Japan United States.
