Cancer Prevention: The Causes and Prevention of Cancer — Volume 1 Graham A. Colditz,D.J. Hunter,2006-04-11 This Cancer Prevention book series aims to complement the research reported in the journal Cancer Causes and Control Volumes in this series will summarize the state of the science from causes to prevention of cancer The scope will be international The past 20 years has seen an explosion of epidemiologic material on the causes of cancer Examples include the growing number of studies of physical activity and colon cancer which have emerged and the numerous studies of components of diet such as alcohol and the risk of specific cancers Major shifts in resource allocation now focus on translation of this new knowledge to actual cancer prevention programs Researchers practicing clinicians and those who write and implement public health policy need this information summarized in an easily accessible format The abundance of knowledge increasing understanding of how to communicate risk of cancer to the public and greater public awareness of cancer make the coming years ones in which we will see many new attempts at widespread cancer prevention programs For example the U S Centers for Disease Control and Prevention launched a national colon cancer awareness campaign in early 1999

Understanding Cancer Prevention through Geospatial Science Trevor Dummer,2024-09-27 The worldwide cancer burden will double over the next two decades with the number of new cancer diagnoses increasing in all regions of the world However it is estimated that around 40% of all cancers are preventable through the appropriate application of existing epidemiological and public health knowledge and with further research this proportion will increase considerably This edited volume explores the role of place in cancer prevention and how geospatial tools can be used to support this globally important goal Its chapters detail many aspects of the application of geospatial science to cancer control including quantifying exposure to environmental carcinogens access to screening services the importance of partnership building and more through a variety of geographically diverse case studies The book also offers background on geospatial modeling tools and methods for adding spatial analysis to cancer surveillance systems The book is rooted firmly in the notion that geography significantly influences the accumulation of cancer risks at the individual and community level that are modifiable through policy regulatory and behavioral changes The landscape of cancer prevention is vast encompassing the building blocks of population and public health i e epidemiology and causation through risk factor modifications behavior and policy change to the interface of the cellular with society including epigenetic modifications and gene environment interactions cancer genomics and precision medicine health It is clear that geography space place setting context is central to all these activities Geospatial methods and data support risk factor identification can elucidate the interaction between individual behavioral demographic and genetic factors with community level contextual factors and can be used to prioritize interventions more accurately towards at risk

people and at risk population groups Geography is also central to the organization of health services and hence by definition is fundamental to the organization of preventative services More broadly adopting a geographical approach can help move cancer prevention beyond a narrow medical definition of health to tackle the upstream and structural determinants of cancer
