Probability in Banach Spaces, 8: Proceedings of the Eighth International Conference R.M. Dudley, M.G. Hahn, J. Kuelbs, 2012-12-06 Probability limit theorems in infinite dimensional spaces give conditions under which convergence holds uniformly over an infinite class of sets or functions Early results in this direction were the Glivenko Cantelli Kolmogorov Smirnov and Donsker theorems for empirical distribution functions Already in these cases there is convergence in Banach spaces that are not only infinite dimensional but nonseparable But the theory in such spaces developed slowly until the late 1970 s Meanwhile work on probability in separable Banach spaces in relation with the geometry of those spaces began in the 1950 s and developed strongly in the 1960 s and 70 s We have in mind here also work on sample continuity and boundedness of Gaussian processes and random methods in harmonic analysis By the mid 70 s a substantial theory was in place including sharp infinite dimensional limit theorems under either metric entropy or geometric conditions Then modern empirical process theory began to develop where the collection of half lines in the line has been replaced by much more general collections of sets and functions on multidimensional spaces Many of the main ideas from probability in separable Banach spaces turned out to have one or more useful analogues for empirical processes Tightness became asymptotic equicontinuity Metric entropy remained useful but also was adapted to metric entropy with bracketing random entropies and Kolchinskii Pollard entropy Even norms themselves were in some situations replaced by measurable majorants to which the well developed separable theory then carried over straightforwardly

Marcus, 2012-12-06 The papers contained in this volume are an indication of the topics discussed and the interests of the participants of The 9 International Conference on Probability in Banach Spaces held at Sandbjerg Denmark August 16-21 1993 A glance at the table of contents indicates the broad range of topics covered at this conference What defines research in this field is not so much the topics considered but the generality of the questions that are asked The goal is to examine the behavior of large classes of stochastic processes and to describe it in terms of a few simple properties that the processes share The reward of research like this is that occasionally one can gain deep insight even about familiar processes by stripping away details that in hindsight turn out to be extraneous A good understanding about the disciplines involved in this field can be obtained from the recent book *Probability in Banach Spaces* Springer Verlag by M Ledoux and M Talagrand On page 5 of this book there is a list of previous conferences in probability in Banach spaces including the other eight international conferences One can see that research in this field over the last twenty years has contributed significantly to knowledge in probability and has had important applications in many other branches of mathematics most notably in statistics and functional analysis

D1 1986 The conference was attended by 45 participants from several countries One thing makes this conference completely different from the previous five ones namely that it was arranged jointly in Probability in Banach spaces and Banach space theory with almost equal representation of scientists in the two fields Though these fields are closely related it seems that direct collaboration between researchers in the two groups has been seldom It is our feeling that the conference where the participants were together for five days taking part in lectures and intense discussions of mutual problems has contributed to a better understanding and closer collaboration in the two fields The papers in the present volume do not cover all the material presented in the lectures several results covered have been published elsewhere The sponsors of the conference are The Carlsberg Foundation The Danish Natural Science Research Council The Danish Department of Education The Department of Mathematics Odense University The Department of Mathematics Aarhus University The Knudsen Foundation Odense Odense University The Research Foundation of Aarhus University The Thborg Foundation The participants and the organizers would like to thank these institutions for their support The Organizers Contents A de Acosta and M Ledoux On the identification of the limits in the law of the iterated logarithm in Banach spaces **Probability in Banach Spaces** A. Probability in Banach Spaces 7 Eberlein, Külbs, Marcus, 2012-12-06 The first international conference on Probability in Banach Spaces was held at Oberwolfach West Germany in 1975 It brought together European researchers who under the inspiration of the Schwartz Seminar in Paris were using probabilistic methods in the study of the geometry of Banach spaces a rather small number of probabilists who were already studying classical limit laws on Banach spaces and a larger number of probabilists specialists in various aspects of the study of Gaussian processes whose results and techniques were of interest to the members of the first two groups This first conference was very fruitful It fostered a continuing relationship among 50

to 75 probabilists and analysts working on probability on infinite dimensional spaces the geometry of Banach spaces and the use of random methods in harmonic analysis Six more international conferences were held since the 1975 meeting Two of the meetings were held at Tufts University one at Sønderborg Denmark and the others at Oberwolfach This volume contains a selection of papers by the participants of the Seventh International Conference held at Oberwolfach West Germany June 26 July 2 1988 This exciting and provocative conference was attended by more than 50 mathematicians from many countries These papers demonstrate the range of interests of the conference participants In addition to the ongoing study of classical and modern limit theorems in Banach spaces a branching out has occurred among the members of this group
