ABSTRACT

Software clones are identical or similar pieces of code, design or other artifacts. Clones are known to be closely related to various issues in software engineering, such as software quality, complexity, architecture, refactoring, evolution, licensing, plagiarism, and so on. Various characteristics of software systems can be uncovered through clone analysis, and systems restructuring can be performed by merging clones.

The goals of this workshop are to bring together researchers and practitioners from around the world to evaluate the current state of research and applications, discuss common problems, discover new opportunities for collaboration, exchange ideas, envision new areas of research and applications, and explore synergies with similarity analysis in other areas and disciplines.

1. INTRODUCTION

Beginning in 2002, the first edition of the *International Workshop on Detection of Software Clones*, this community began to form itself and to find ways to meet and collaborate. In November 2003, the *Second International Workshop on Software Clones* held at WCRE 2003 saw a broadening of its scope and participant background. Six years later, in March 2009, the number of participants of the *Third International Workshop on Software Clones* (held in conjunction with CSME 2009) confirmed the interest that code clone research attracts. In recognition of the relevance of clones

to the broader software engineering research community, in May 2010 the *Fourth International Workshop on Software Clones* became an ICSE workshop for the first time at ICSE 2010 in Cape Town.

The primary aims of the workshop are to:

- provide a common forum for software clone research and applications
- bring together researchers and practitioners in the field
- clarify and assess the current state of research
- discuss common problems and emerging research directions
- exchange ideas, explore and envision new applications and new areas of research
- discuss and exchange new empirical results, new insights and new approaches
- discover new opportunities for collaboration
- establish a list of new emerging research directions

The expected outcome is a list of open issues that should be addressed in the near future and concrete plans on how to conduct research to address these issues.

2. WORKSHOP THEMES

This workshop is intended as a discussion forum where original and innovative ideas can be openly presented, criticized and refined. It is an explicit goal of this workshop to focus on novel and forward-looking ideas as well as experience and practical applications.

Relevant topics include, but are not limited to:

- Definition of software clones
- Types, distribution, and nature of clones in software
- Causes and effects of clones
- Techniques and algorithms for clone detection, analysis, and management
- Clone and clone pattern visualization
- Tools and systems for detecting and analyzing clones
- Applications of clone analysis
- Clone management
- System architecture and clones
- Effect of clones on system complexity and quality
- Clone analysis in families of similar systems
- Industrial experiences
- Measures of code similarity
- Economic and trade-off models for clone removal
- Evaluation and benchmarking of detection methods
- Licensing and plagiarism issues
- Clone-aware software design and development
- Refactoring through clone analysis

trend are an increase in the size of software systems the variability in software artifacts and the importance of software in achieving the system level properties Software architecture provides the necessary abstractions for managing the resulting complexity We here introduce the Third Working IEEE/IFIP Conference on Software Architecture WICSA3 That it is already the third such conference is in itself a clear indication that software architecture continues to be an important topic in industrial software development and in software engineering research However becoming an established field does not mean that software architecture provides less opportunity for innovation and new directions On the contrary one can identify a number of interesting trends within software architecture research The first trend is that the role of the software architecture in all phases of software development is more explicitly recognized Whereas initially software architecture was primarily associated with the architecture design phase we now see that the software architecture is treated explicitly during development product derivation in software product lines at run time and during system evolution Software architecture as an artifact has been decoupled from a particular lifecycle phase
