Feagans, Elizabeth J. Short, 2012-11-12 Although experts agree that various types of learning disabilities do exist few attempts have been made to classify learning disabled children into subtypes The editors of this collection feel that the lack of subcategorization has frustrated previous research efforts to obtain a generalizable body of knowledge in the field To meet

this critical need for definitive information this book presents basic reviews and theoretical approaches used to subtype learning disabled children ranging from a behavior genetics approach to a dimensional approach It also demonstrates actual research methods utilizing theoretical approaches **Transfer of Learning** Stephen M. Cormier, Joseph D.

Hagman, 2014-06-28 Since the mid 1970s scientific and educational research has left a gap in the field of basic and applied research on transfer of learning This book fills the gap with state of the art information on recent research in the field emphasizing methodological paradigms and interpretive concepts based on contemporary cognitive information processing approaches to the study of human behavior Issues discussed include how transfer is measured how its direction and magnitude are determined how training for transfer differs from training for acquisition and whether different principles of transfer apply to motor cognitive and meta cognitive processes *Curriculum Review* ,1980 **Resources in Education**

,2001-04 Cognitive Learning and Memory in Children M. Pressley, C.J. Brainerd, 2012-12-06 For some time now the study of cognitive development has been far and away the most active discipline within developmental psychology Although there would be much disagreement as to the exact proportion of papers published in developmental journals that could be considered cognitive 50% seems like a conservative estimate Hence a series of scholarly books devoted to work in cognitive development is especially appropriate at this time The Springer Series in Cognitive Development contains two basic types of books namely edited collections of original chapters by several authors and original volumes written by one author or a small group of authors The flagship for the Springer Series is a serial publication of the advances type carrying the subtitle Progress in Cognitive Development Research Each volume in the Progress sequence is strongly thematic in that it is limited to some well defined domain of cognitive developmental research e g logical and mathematical development development of learning All Progress volumes will be edited collections Editors of such collections upon consultation with the Series Editor may elect to have their books published either as contributions to the Progress sequence or as separate volumes All books written by one author or a small group of authors are being published as separate volumes within the series A fairly broad definition of cognitive development is being used in the selection of books for this series Research in Education ,1973
