Shavlik,Thomas Glen Dietterich,1990 The ability to learn is a fundamental characteristic of intelligent behavior Consequently machine learning has been a focus of artificial intelligence since the beginnings of AI in the 1950s The 1980s saw tremendous growth in the field and this growth promises to continue with valuable contributions to science engineering and business Readings in Machine Learning collects the best of the published machine learning literature including papers that address a wide range of learning tasks and that introduce a variety of techniques for giving machines the ability to learn The editors in cooperation with a group of expert referees have chosen important papers that empirically study theoretically analyze or psychologically justify machine learning algorithms The papers are grouped into a dozen categories each of which is introduced by the editors Readings in Artificial Intelligence and Databases John Mylopoulos,Michael L. Brodie,2014-06-28 The interaction of database and AI technologies is crucial to such applications as data mining active databases and knowledge based expert systems This volume collects the primary readings on the interactions actual and potential between these two fields The editors have chosen articles to balance significant early research and the best and most comprehensive articles from the 1980s An in depth introduction discusses basic research motivations giving a survey of the history concepts and terminology of the interaction Major themes approaches and results open issues and future directions are all discussed including the results of a major survey conducted by the editors of current work in industry and research labs Thirteen sections follow each with a short introduction Topics examined include semantic data models with emphasis on conceptual modeling techniques for databases and information systems and the integration of data model concepts in high level data languages definition and maintenance of integrity constraints in databases and

Neurorehabilitation – Case Report Collection 2022 Giorgio Sandrini,Thomas Platz,Ross D. Zafonte,2023-10-10 This Research Topic aims to collect all the Case Reports submitted to the Neurorehabilitation section All the Case Reports submitted to this collection will be personally assessed by the Specialty Chief Editor before the beginning of the peer review process Please make sure your article adheres to the following guidelines before submitting it   *Philosophy and Technology II* Carl Mitcham,Alois Huning,1986-03-31 Until recently the philosophy and history of science proceeded in a separate way from the philosophy and history of technology and indeed with respect to both science and technology philosophical and historical inquiries were also following their separate ways Now we see in the past quarter century how the philosophy of science has been profoundly in fluenced by historical studies of the sciences and no longer concerned so single mindedly with the analysis of theory and explanation with the re lation between hypotheses and experimental observation Now also we see the traditional historical studies of technology supplemented by phi losophical questions and no longer so plainly focussed upon contexts of application on invention and practical engineering and on the mutually stimulating relations between technology and society Further alas the neat division of intellectual labor those clearly drawn distinctions be tween science and technology between the theoretical and the applied between discovery and justification between internalist and externalist approaches all all have become muddled Partly this is due to internal revolutions within the philosophy and his tory of science the first result being recognition of their mutual rele vance Partly however this state of muddle is due to external factors science at the least in the last half century has become so intimately connected with technology and technological developments have cre ated so many new fields of scientific and philosophical inquiry that any critical reflection on scientific and technological endeavors must hence forth take their interaction into account   **Role of Maps in Sci-Tech Libraries** Ellis Mount,2020-06-04 Maps charts and related items present special problems to libraries for example a less organised bibliographic control mechanism more difficult means of acquisitions and problems of storage and preservation This book first published in 1985 deals with these problems and presents practical solutions for maps in library collections   Reasoning about Rational Agents Michael Wooldridge,2003-01-01 This book focuses on the belief desire intention BDI model of rational agents which recognizes the primacy of beliefs desires and intentions in rational action One goal of modern computer science is to engineer computer programs that can act as autonomous rational agents software that can independently make good decisions about what actions to perform on our behalf and execute those actions Applications range from small programs that intelligently search the Web buying and selling goods via electronic commerce to autonomous space probes This book focuses on the belief desire intention BDI model of rational agents which recognizes the

primacy of beliefs desires and intentions in rational action The BDI model has three distinct strengths an underlying philosophy based on practical reasoning in humans a software architecture that is implementable in real systems and a family of logics that support a formal theory of rational agency The book introduces a BDI logic called LORA Logic of Rational Agents In addition to the BDI component LORA contains a temporal component which allows one to represent the dynamics of how agents and their environments change over time and an action component which allows one to represent the actions that agents perform and the effects of the actions The book shows how LORA can be used to capture many components of a theory of rational agency including such notions as communication and cooperation   **LC Science Tracer Bullet** ,1972

An Introduction to MultiAgent Systems Michael Wooldridge,2009-06-22 The study of multi agent systems MAS focuses on systems in which many intelligent agents interact with each other These agents are considered to be autonomous entities such as software programs or robots Their interactions can either be cooperative for example as in an ant colony or selfish as in a free market economy This book assumes only basic knowledge of algorithms and discrete maths both of which are taught as standard in the first or second year of computer science degree programmes A basic knowledge of artificial intelligence would useful to help understand some of the issues but is not essential The book s main aims are To introduce the student to the concept of agents and multi agent systems and the main applications for which they are appropriate To introduce the main issues surrounding the design of intelligent agents To introduce the main issues surrounding the design of a multi agent society To introduce a number of typical applications for agent technology After reading the book the student should understand The notion of an agent how agents are distinct from other software paradigms e g objects and the characteristics of applications that lend themselves to agent oriented software The key issues associated with constructing agents capable of intelligent autonomous action and the main approaches taken to developing such agents The key issues in designing societies of agents that can effectively cooperate in order to solve problems including an understanding of the key types of multi agent interactions possible in such systems The main application areas of agent based systems   **AI Magazine** ,1998
