Raymond, 2010-12-01 As the title suggests this six chapter book responds to a question which in Western culture goes back to Plato Aristotle Cicero and Quintilian namely What should rhetoric teachers ask their students to read Primarily historical the first two chapters trace conflicting answers to the question above focusing on two constructive results of the debate the re-invention of rhetoric and writing as a discipline a coherent and growing body of knowledge and as a result the emergence of independent departments of writing free from departments of English free therefore to develop their own curriculum and to manage their own budgets Additionally the

second chapter examines two destructive consequences of this debate the ban of literature from writing courses where students might profitably study both and as a result the often painful departmental splits which not only separate former colleagues but also cramp the pedagogy of those trained to teach both writing and literature More than a survey of key publications this chapter encourages readers to honor the discipline of rhetoric but to make a place for literature on their composition syllabi The next four chapters provide pedagogical support for these chief claims that literature can and should be taught in writing courses and that such readings need not distract students from the primary text their own writing On the contrary these readings motivate serious writing when students feel invited into a conversation on issues that touch their lives These pedagogical chapters then move entering professionals from the theoretical debate to the application of theory therefore the book would serve well professors of courses in composition theory particularly those who enjoy teaching the conflicts and preparing their graduate students to design assignments and courses that apply theories of learning reading and composing

Technical Writing, 2003* *Readings for Technical Communication* Jennifer MacLennan, 2008 This outstanding anthology of insightful essays written by both theorists and practitioners focuses on the content and structure of technical writing while also discussing the political interpersonal and ethical demands of writing in a professional workplace Unlike most other texts in the field *Readings in Technical Communication* goes beyond offering a traditional prescriptive approach to technical writing and provides students with a comprehensive and thoughtful examination of the field Along with a wide variety of classic essays RTC includes a wealth of new material that reflects the most up to date approaches and methods in technical communication
