goal of phylogenetic systematics cladistics is to discover the kinship relations between all organisms on earth and to translate
the order we perceive in Nature into an equivalent man made system Although the goal is easily formulated the path is
thorny and the results achieved continue to be imperfect This is the fate of any science that bases its propositions on the
interpretation of historical evidence The diversity found in the millions of species originated as a result of the continuous
splitting of biopopulations through time Combined with this was the emergence of hierarchically linked descent communities
of species We call the process of origin of descent communities phylogenesis We do not know however the exact course of
phylogenesis we can only formulate hypotheses The historical evidence at hand consists of the feature patterns of extant
species and of extinct species with their combination of original and derived traits which are the result of evolution
