Reality Of Numbers A Physicalists Philosophy Of Mathematics:

The Reality of Numbers John Bigelow, 1988 This book casts new light on mathematics through its consideration of metaphysical materialism The author identifies natural real and imaginary numbers and sets with specified physical properties and relations However sets are construed numbers are not sets Sets are important simply because they instantiate all the numbers and all the other properties and relations studied in mathematics Set theory tempts us into misunderstanding the nature of mathematics Bigelow challenges the myth that mathematical objects can be defined into existence By reconstruing numbers as real non linguistic physical properties or relations mathematics can be drawn back from its sterile abstract exile into the midst of the physical world to which we belong

An Aristotelian Realist Philosophy of Mathematics J. Franklin, 2014-04-09 Mathematics is as much a science of the real world as biology is It is the science of the world's quantitative aspects such as ratio and structural or patterned aspects such as symmetry The book develops a complete philosophy of mathematics that contrasts with the usual Platonist and nominalist options

Neo-Aristotelian Perspectives in Metaphysics Daniel D. Novotný, Lukáš Novák, 2014-04-16 This volume re-examines some of the major themes at the intersection of traditional and contemporary metaphysics The book uses as a point of departure Francisco Suarez's *Metaphysical Disputations* published in 1597 Minimalist metaphysics in empiricist pragmatist clothing have today become mainstream in analytic philosophy Independently of this development the progress of scholarship in ancient and medieval philosophy makes clear that traditional forms of metaphysics have affinities with some of the streams in contemporary analytic metaphysics The book brings together leading contemporary metaphysicians to investigate the viability of a neo-Aristotelian metaphysics
