Gupta,Akshai K. Runchal,Dibakar Rakshit,Abhijit Kushari,2025-09-26 The primary focus of this contributed volume is on providing cutting edge developments in a number of critically important fields including energy combustion power propulsion environment using fossil fuels and the production and use of biofuels The availability of clean and sustainable energy is more crucial now than ever before for all areas of energy use in power mobility and propulsion In the future the energy used will only grow due to the increase in population and enhanced standards of living This book includes contributions from globally recognized specialists from various regions of the world They have provided the most recent advances in both basic and applied research on the creation of cleaner energy and its application for a variety of technologies from microscale energy conversion to supersonic and hypersonic propulsion powered by hydrocarbon fuels Clean and efficient energy conversion for

various stationary and propulsion applications including hypersonic propulsion thermal management emission control and environmental issues for energy sustainability are amongst the challenges and opportunities followed for the specific applications In parallel some of the other applications include the combustion of fossil and biofuels clean energy production from low grade materials such as waste and biomass and alternative fuels via rigorous modeling and simulation with a focus on efficiency and environmental issues The present and future R D activities include specially designed technical tracks and contributions from internationally recognized technical experts that reveal different but complementary viewpoints on fuels combustion power and propulsion and air toxins The development and implementation of novel energy conversion technologies require solid fundamental understanding as well as research and development efforts at different scales from bench to pilot to full scale We conjecture that for the foreseeable future hydrocarbon fuels will likely remain a major source of energy in all sectors of power transportation and propulsion with a slow but steady increase in renewable energy resources in the overall energy mix A multifaceted strategy is needed for the energy and environmental sustainability of all power and propulsion systems This includes creating and utilizing alternative and renewable fuels designing flexible fuel combustion systems that are simple to use with the new fuels and developing cutting edge eco friendly technologies to maximize the use of all types of gas liquid and solid fuels This book provides a wealth of knowledge as a reference for practicing engineers research engineers researchers and managers in labs and industry academic institutions graduate students and senior year undergraduates studying mechanical chemical aerospace energy and environmental and industrial engineering

Turbulent Combustion Modeling Tarek Echekki, Epaminondas Mastorakos, 2010-12-25 Turbulent combustion sits at the interface of two important nonlinear multiscale phenomena chemistry and turbulence Its study is extremely timely in view of the need to develop new combustion technologies in order to address challenges associated with climate change energy source uncertainty and air pollution Despite the fact that modeling of turbulent combustion is a subject that has been researched for a number of years its complexity implies that key issues are still eluding and a theoretical description that is accurate enough to make turbulent combustion models rigorous and quantitative for industrial use is still lacking In this book prominent experts review most of the available approaches in modeling turbulent combustion with particular focus on the exploding increase in computational resources that has allowed the simulation of increasingly detailed phenomena The relevant algorithms are presented the theoretical methods are explained and various application examples are given The book is intended for a relatively broad audience including seasoned researchers and graduate students in engineering applied mathematics and computational science engine designers and computational fluid dynamics CFD practitioners scientists at funding agencies and anyone wishing to understand the state of the art and the future directions of this scientifically challenging and practically important field
