**Recent progress in many-body theories : proceedings of the ... International Conference on Recent Progress in Many-Body Theories ,1981** **Recent Progress in Many-body Theories** Jordi Boronat, 2008 This volume contains the main contributions to the 14th International Conference on Recent Progress in Many Body Theories RPMBT14 held at the Technical University of Catalonia Spain in July 2007 This conference which was first held in Trieste in 1979 is devoted to new developments in the field of many body theories which are being applied and developed in a rapidly growing number of fields The emphasis is twofold progress in the technical aspects of microscopic theories and a review of recent applications of many body techniques In addition to the more traditional topics such as nuclear physics and quantum liquids the present volume also includes the most recent results on atomic physics cold Bose and Fermi gases phase transitions and quantum information Moreover the volume contains the lectures of the winners of the 2007 Feenberg Medal and 2007 Kuemmel Award as well as their laudations

*Recent Progress in Many-body Theories* Joseph A. Carlson, Gerardo Ortiz, 2006 Quantum many body theory has greatly expanded its scope and depth over the past few years treating more deeply long standing issues like phase transitions and strongly correlated systems and simultaneously expanding into new areas such as cold atom physics and quantum information This collection of contributions highlights recent advances in all these areas by leaders in their respective fields Also included are some historic perspectives by L P Gor'kov and S T Belyaev Feenberg Medal Recipients at this conference and Nobel Laureate P W Anderson gives his unique outlook on the future of physics The volume covers the key topics in many body theory tied together through advances in theoretical tools and computational techniques and a unifying theme of fundamental approaches to quantum

many body physics      Recent Progress in Many-body Theories Raymond F. Bishop, 2000 Quantum many body theory as a discipline in its own right dates largely from the 1950 s It has developed since then to its current position as one of the cornerstones of modern theoretical physics The field remains vibrant and active vigorous and exciting Indeed its successes and importance were vividly illustrated prior to the conference by the sharing of the 1998 Nobel Prizes in both Physics and Chemistry by three many body theorists Two of those Nobel laureates Walter Kohn and Bob Laughlin delivered invited lectures at this meeting the tenth in the series of International Conferences on Recent Progress in Many Body Theories This series is universally recognized as being the premier series of meetings on this subject and its proceedings have always summarized the current state of the art through the lectures of its leading practitioners The present volume is no exception A major aim of this conference series has been to foster the exchange of ideas between physicists working in all the diverse fields of application of quantum many body theory These include nuclear and subnuclear physics quantum fluids strongly correlated electronic systems and low dimensional condensed matter systems and materials All of these fields and others are represented in the present volume Other topical themes covered include density functional theory and its applications to nuclear and electronic systems quantum dots and chaos and trapped Bose Einstein condensates Through this breadth of applications the reader will get a clear illustration of the power of the tools of modern microscopic quantum many body theory and their usefulness both in achieving a commonality of approach and understanding and in transferring powerful ideas from one field to another      **Proceedings of the International Conference on Recent Progress in Many- Body Theories**

Claudio Ciofi DegliAtti, A. Kallio, 1979      *Recent Progress in Many-body Theories* Jordi Boronat, 2008 This volume contains the main contributions to the 14th International Conference on Recent Progress in Many Body Theories RPMBT14 held at the Technical University of Catalonia Spain in July 2007 This conference which was first held in Trieste in 1979 is devoted to new developments in the field of many body theories which are being applied and developed in a rapidly growing number of fields The emphasis is twofold progress in the technical aspects of microscopic theories and a review of recent applications of many body techniques In addition to the more traditional topics such as nuclear physics and quantum liquids the present volume also includes the most recent results on atomic physics cold Bose and Fermi gases phase transitions and quantum information Moreover the volume contains the lectures of the winners of the 2007 Feenberg Medal and 2007 Kuemmel Award as well as their laudations      *Recent Progress in Many-Body Theories* Y. Avishai, 2012-12-06 The present volume contains the texts of the invited talks delivered at the Sixth International Conference on Recent Progress in Many Body Theories held in Arad Israel during the period November 5 10 1989 The host institute was the Physics Department at the Ben Gurion University of the Negev Beside the invited talks there have been also two poster sessions The general format and style of the meeting followed closely those which had preceded it and evolved from the earlier conferences in the series Trieste 1978 Oxtapec 1981 Altenberg 1983 San Francisco 1985 and Oulu 1987 The conferences in this series are intended to

cover the broad spectrum of modern physics related to the many body problem. It starts on the smallest length scales in dealing with quark gluon plasmas and ends on the largest length scales in tackling many body problems in astrophysics. In between it is concerned with nuclear physics, solid state physics, statistical mechanics, field theory, molecular dynamics, hydrodynamics, chaos etc. Like in the Oulu conference, special emphasis has been put on recent developments in high  $T_c$  superconductivity. Beside the half day session devoted to it, we have also organized an evening round table discussion on the future of the whole subject. Furthermore, a new and in the opinion of the editor, a very refreshing element which was absent in earlier conferences was the presentation of a few talks by experimentalists.

*Recent Progress in MANY-BODY THEORIES*  
A.J. Kallio, E. Pajanne, R.F. Bishop, 2013-03-14. The present volume contains the texts of the invited talks delivered at the Fifth International Conference on Recent Progress in Many Body Theories held in Oulu, Finland, during the period 3-8 August 1987. The general format and style of the meeting followed closely those which had evolved from the earlier conferences in the series: Trieste 1978, Oaxtepec 1981, Altenberg 1983, and San Francisco 1985. Thus the conferences in this series are intended as far as is practicable to cover in a broad and balanced fashion both the entire spectrum of theoretical tools developed to tackle the quantum many body problem and their major fields of application. One of the major aims of the series is to foster the exchange of ideas and techniques among physicists working in such diverse areas of application of many body theories as nucleon-nucleon interactions, nuclear physics, astronomy, atomic and molecular physics, quantum chemistry, quantum fluids and plasmas, and solid state and condensed matter physics. A special feature of the present meeting, however, was that particular attention was paid in the programme to such topics of current interest in solid state physics as high temperature superconductors, heavy fermions, the quantum Hall effect, and disorder. A panel discussion was also organised during the conference under the chairmanship of N.W. Ashcroft to consider the latest developments in the extremely rapidly growing field of high  $T$  superconductors.

Recent Progress in Many-Body Theories  
H. Mitter, E. Schachinger, H. Sormann, 2012-12-06. The present volume contains the text of the invited talks delivered at the Eighth International Conference on Recent Progress in Many Body Theories held at Schloß Seggau, Province of Styria, Austria, during the period August 22-26, 1994. The proceedings of the Fifth Conference, Oulu, Finland, 1987, the Sixth Conference, Arad, Israel, 1989, and the Seventh Conference, Minneapolis, USA, 1991, have been published by Plenum as the first three volumes of this series. Papers from the First Conference, Trieste, Italy, 1978, comprise Nuclear Physics volume A328, Nos. 1 and 2. The Second Conference, Oaxtepec, Mexico, 1979, was published by Springer Verlag as volume 142 of Lecture Notes in Physics, entitled *Recent Progress in Many Body Theories*. Volume 198 of the same series contains the papers from the Third Conference, Altenberg, 1983. These volumes intend to cover a broad spectrum of current research topics in physics that benefit from the application of many body theories for their elucidation. At the same time, there is a focus on the development and refinement of many body methods. One of the major aims of the conference series has been to foster the exchange of ideas among

physicists working in such diverse areas as nuclear physics quantum chemistry complex systems lattice Hamiltonians quantum fluids and condensed matter physics The present volume contains contributions from all these areas th The conference was dedicated on the occasion of Ludwig Boltzmann s 150 birthday
