## **Receptor Autoradiography:**

*Receptor Localization* Marjorie Ariano, 1998-07-16 The detection of neurotransmitter receptor locations and distribution densities within the central nervous system and peripheral tissues is receiving intense attention within the neuroscience research community. Neurotransmitter receptors, which receive the chemical signals sent from one neuron to another, are critical links in a highly complex information processing chain. Pinpointing receptor sites and systems is crucial for understanding neurological function as well as dysfunction. It is also essential for understanding how receptors process information when impacted by such substances as heroin or nicotine or when affected by neurodegenerative disease. *Receptor Localization: Laboratory Methods and Procedures* is the first user-friendly guide to the latest techniques and approaches being employed to examine the localization of neurotransmitter receptors in the central nervous system and peripheral tissues. It covers detection methods that are applicable to a wide variety of receptor systems ranging from genes and ligands to in vitro receptors in individuals and to numerous receptor subtypes such as nicotine, muscarine, tachykinins, dopamine, adenosine, and GABA. The standard laboratory recipes or tricks employed in these detection methods are fully discussed, as are the advantages and limitations of each procedure. With contributions from leading experts and extensively illustrated, this book discusses receptor-ligand binding methods using irreversible and reversible compounds. Presents anti-receptor antisera technology using synthetic peptides and fusion proteins at both the cellular and subcellular resolution levels. Examines molecular assessments of receptors. Describes in situ hybridization, reverse transcriptase PCR, and fluorescent in situ transcription. Covers new visualization paradigms. Includes physiological analysis of receptor function, cellular detection in the brain slice and cultured neurons. Discusses the use of PET and SPECT to assess in vivo receptor distributions in animals and humans. *Receptor Localization: Laboratory Methods and Procedures* is an invaluable guide for researchers in the related fields of neurology, biochemistry, and pharmacology. Its lucid descriptions of new detection methods, inclusion of experimental examples, and emphasis on how these experimental approaches are applicable to particular research areas will appeal to both the experienced researcher and novice investigator. **Handbook of Neurochemistry and Molecular Neurobiology** Glen Baker, Susan Dunn, Abel Lajtha, Andrew Holt, 2007-03-26 The Handbook is intended to be a service to the neuroscience community to help in finding available and useful information, to point out gaps in our knowledge, and to encourage continued studies. It represents the valuable contributions of the many authors of the chapters and the guidance of the editors, and most important, it represents support for research in this discipline. Based on the rapid advances in the years since the second edition. **Receptor Autoradiography** Dr. John Wharton, Julia M. Polak, 1993 Receptor autoradiography is an invaluable technique that is widely used to localize and characterize peptide and neurotransmitter binding sites. Its extensive use reflects the utility of the technique and the important advantages it offers over conventional biochemical procedures. This instructive work makes receptor autoradiography more accessible by giving a

detailed account of the methodology and its application in the analysis of receptors in the brain and peripheral organs These examples are not exhaustive but illustrate the versatility of the technique as well as its potential pitfalls The book provides an introduction to the receptor concept and gives detailed information on the theory and procedures involved in the autoradiographic localization and quantification of radiolabelled ligand binding sites This volume will be an essential tool for neuroscientists pharmacologists histochemists neuropathologists researchers in the pharmaceutical industry and students of the biological sciences

**Autoradiography** John R.J. Baker, 2023-05-31 This book describes levels of autoradiography which is the localization within a solid specimen of a radiolabel to help the beginner or biologist choose the correct approach for particular application It attempts to lay emphasis on certain aspects of the appraisal of autoradiographs

**Peptide Receptors, Part II** A. Björklund, T. Hökfelt, P. Quinton, 2002-12-13 Peptide Receptors Part I was published in 2000 as volume 16 of the Handbook of Chemical Neuroanatomy series This volume summarized current knowledge on the discrete anatomical distribution of ten families of neuropeptide receptors expressed in the mammalian CNS Part II is its natural complement with chapters covering six additional families of neuropeptide receptors for ligands ranging from well known peptides such as the opioids and neurotensin to recently isolated ones like the orexins As in the case of Part I this volume integrates photomontages and maps of quantitative receptor autoradiography in situ hybridization histochemistry and immunocytochemistry Data derived from transgenic and knock out animals are also summarized helping to decipher the possible physiological and Pathophysiological roles of a given peptide family Some chapters also review current knowledge on the profile of internalization of the neuropeptide receptor complex an area of intense research activities that should help to better understand mechanisms involved in desensitization and tachyphylaxis

**Peptide Receptors** Remi Quirion, Anders Björklund, Tomas Hökfelt, 2003 Peptide Receptors Part I was published in 2000 as volume 16 of the Handbook of Chemical Neuroanatomy series This volume summarized current knowledge on the discrete anatomical distribution of ten families of neuropeptide receptors expressed in the mammalian CNS Part II is its natural complement with chapters covering six additional families of neuropeptide receptors for ligands ranging from well known peptides such as the opioids and neurotensin to recently isolated ones like the orexins As in the case of Part I this volume integrates photomontages and maps of quantitative receptor autoradiography in situ hybridization histochemistry and immunocytochemistry Data derived from transgenic and knock out animals are also summarized helping to decipher the possible physiological and Pathophysiological roles of a given peptide family Some chapters also review current knowledge on the profile of internalization of the neuropeptide receptor complex an area of intense research activities that should help to better understand mechanisms involved in desensitization and tachyphylaxis

**The Orexin/Hypocretin System** Seiji Nishino, Takeshi Sakurai, 2007-11-22 The Orexin Hypocretin System provides an overview of all the recent exciting discoveries in the field as well as new findings

such as ligand replacement and gene therapies in the animal models of narcolepsy Several contributions cover sleep and the multiple systems involved in its regulation      *Receptor Localization* Frances M. Leslie, C. Anthony Altar, 1988

**Peptidergic G Protein-coupled Receptors** Pierangelo Geppetti, Werner Müller-Esterl, Domenico Regoli, 1999 Peptides are a rapidly growing class of mediators whose activity regulates homeostasis as well as pathological processes Most of the peptide activated receptors belong to the superfamily of 7 transmembrane domain receptors coupled to G proteins Peptides of different sizes from a few to more than 100 aminoacids activate peptidergic receptors by interacting at specific sites that often differ from those where antagonists bind Other receptors are activated by proteases that by cleaving the receptor extracellular region unmask a tethered ligand G protein coupled receptors for chemokines represent the way of entry of the HIV virus in target cells The great impact of non peptide agonist antagonists in current and future medicine reflects these large variety of functions and modes of activation of peptidergic G protein coupled receptors
