Engineering Leslie Jackson, Thomas D. Morton, 2006-07-31 This eighth volume of Reed's Marine Engineering Series prepares students for the Department of Transport Certificates of Competency in General Engineering Knowledge. It also covers the syllabus for Engineer Cadet courses in the subject. The syllabus and principles involved are virtually the same for all examinations but questions set in Class One require the most detailed answers. The book follows the same pattern as the other volumes in this series which has proved so successful: emphasis on basic principles, extensive illustrations, worked examples included in the text, practice examples at the end of each chapter and specimen exam questions at the end.

Instrumentation and Control Systems William Bolton, 2004-06-03 In a clear and readable style Bill Bolton addresses the basic principles of modern instrumentation and control systems including examples of the latest devices, techniques and applications. Unlike the majority of books in this field, only a minimal prior knowledge of mathematical methods is assumed. The book focuses on providing a comprehensive introduction to the subject with Laplace presented in a simple and easily accessible form, complemented by an outline of the mathematics that would be required to progress to more advanced levels of study. Taking a highly practical approach, Bill Bolton combines underpinning theory with numerous case studies and applications throughout to enable the reader to apply the content directly to real world engineering contexts. Coverage includes smart instrumentation, DAQ, crucial health and safety considerations and practical issues such as noise reduction, maintenance and testing. An introduction to PLCs and ladder programming is incorporated in the text as well as new information introducing the various software programmes used for simulation. Problems with a full answer section are also included to aid the reader's self assessment and learning and a companion website for lecturers only at <http://textbooks.elsevier.com> features an Instructor's Manual including multiple choice questions, further assignments with detailed solutions as well as additional teaching resources. The overall approach of this book makes it an ideal text for all introductory level undergraduate courses in control engineering and instrumentation. It is fully in line with latest syllabus requirements and also covers in full the requirements of the Instrumentation Control Principles and Control Systems Automation units of the new Higher National Engineering syllabus from Edexcel. Assumes minimal prior mathematical knowledge, creating a highly accessible student-centred text. Problems, case studies and applications included throughout with a full set of answers at the back of the book to aid student learning and place theory in real world engineering contexts. Free online lecturer resources featuring supporting notes, multiple choice tests, lecturer handouts and further assignments and solutions.
