**Contemporary Topics in Analytical and Clinical Chemistry** David Hercules,2012-12-06 Any addition to the ever expanding list of scientific publications requires careful consideration and justification There are already numerous journals in analytical and clinical chemistry adequate for the publication of research results There does remain a need for a series focused on analytical and clinical chemistry to provide an overview of instrumental developments relevant to the needs of analytical and clinical chemists This is the role intended for the present series Although the title specifically indicates that the series will deal with analytical and clinical chemistry our intention is that it will deal with analytical chemistry as related to other areas such as air and water pollution oceanography earth sciences and various aspects of biomedical science and technology It seems appropriate to publish two types of articles in the series First we will provide a forum for authoritative critical reviews for the expert to enable him to cope with the ever growing problem of keeping abreast of rapid developments in his own and immediately related fields In this way we hope the series will stimulate new ideas for research by being at the cutting edge of science Second we will publish articles written by experts in the fields being covered but primarily intended for the nonexpert thereby providing him with some overview of the area Analysis of Cosmetic Products Amparo Salvador,Alberto Chisvert,2017-11-20 Analysis of Cosmetic Products Second Edition advises the reader from an analytical

chemistry perspective on the choice of suitable analytical methods for production monitoring and quality control of cosmetic products This book helps professionals working in the cosmetic industry or in research laboratories select appropriate analytical procedures for production maintain in market quality control of cosmetic products and plan for the appropriate types of biomedical and environmental testing This updated and expanded second edition covers fundamental concepts relating to cosmetic products current global legislation the latest analytical methods for monitoring and quality control characterization of nanomaterials and other new active ingredients and an introduction to green cosmetic chemistry Provides comprehensive coverage of the specific analytical procedures for different analytes and cosmetic samples Includes information on the biomonitoring of cosmetic ingredients in the human body and the environment Describes the most recent developments in global legislation governing the cosmetics industry Introduces green technologies and the use of nanomaterials in the development and analysis of cosmetic ingredients
