Renal Hypertension:

Hypertension in Kidney Disease J.S. Cheigh, K.H. Stenzel, A.M. Rubin, 2012-12-06 Blood pressure control is central to all bodily functions. There are many points in the multifaceted cybernetic system wherein hypertension may be produced. Hypertension is a young disorder whose existence has been known for less than a century. It is not only extremely prevalent among every population but also deleterious to the health of mankind. The more we understand about hypertension's harmful effects, the more urgent is the need for its effective control. The kidney is the central organ that controls vascular tone and body fluid volume; these two factors are dominant in determining arterial blood pressure. Hence, it is not surprising to find in hypertensive disorders that there are abnormalities in the kidneys, functional or anatomical, subtle or overt, that cause or are the consequence of hypertension. The first suggestion that the kidney could cause hypertension was made in 1836, before arterial pressure could even be measured, by Richard Bright. He observed that cardiac hypertrophy was often present in patients who died of renal disease. It was however Goldblatt and his colleagues in 1934 who opened the modern era of experimental and clinical research in renal hypertension. Since then, although far from complete, enthusiastic and intensive research efforts have greatly improved our understanding of the nature of renal hypertension. Management of Renal Hypertension G.R. Catto, 2013-04-17 During the last few years, renal hypertension has become a subject of increasing importance. The development of improved radiological techniques, notably intravenous and intra-arterial digital subtraction angiography, has made the diagnosis of renal artery stenosis more reliable, while advances in vascular surgery and the introduction of percutaneous transluminal angioplasty have caused major changes in clinical practice. The increasing use of such potent antihypertensive agents as the angiotensin I converting enzyme inhibitors has emphasized the problem of renal artery stenosis in older patients with widespread vascular disease, as well as improving the prognosis of patients with accelerated hypertension. This book examines the surgical and medical aspects of renal hypertension in the light of these recent advances. Each chapter has been written by a recognized expert in the field and provides information of relevance and practical importance to the average clinician. The developments of the last decade have emphasized that renal hypertension is no longer a matter only for the nephrologist but a subject on which all clinicians should be well informed. **Renal Hypertension** Irvine Heinly Page, James W. McCubbin, 1968 Correctable Renal Hypertension Chester C. Winter, 1964 *Renovascular and Renal Parenchymatous Hypertension* Thomas Luescher, Norman M. Kaplan, 2012-12-06 This monograph provides a timely update on the pathophysiology, diagnosis, and therapy of renovascular and renal parenchymatous hypertension. The underlying causes of the most common forms of hypertension are discussed in separate chapters. Special emphasis is laid on newer pathophysiological aspects of the disease, in particular the vascular wall renin-angiotensin system. Furthermore, there is in-depth discussion of all the new techniques that are currently available for use in the diagnosis of renal hypertension, e.g. ultrasound and Doppler techniques, magnetic resonance imaging, and nuclear

renography These techniques are discussed by internationally renowned experts in the field The book also covers topics such as the value of medical therapy surgical techniques and percutaneous transluminal angioplasty with special reference to the treatment of renal hypertension **Renal Hypertension** Eduardo Braun-Menéndez, Juan Carlos Fasciolo, Luis F. The Renal Hypertension Guide Kimberly Williams, 2022-10-15 Renal hypertension or renovascular hypertension is high blood pressure caused by the narrowing of your arteries that carry blood to your kidneys It is also sometimes called renal artery stenosis Because your kidneys are not getting enough blood they react by making a hormone that makes your blood pressure rise What Are the Symptoms of Kidney Disease High worsening blood pressure Decrease in the amount of urine or difficulty urinating Edema fluid retention especially in the lower legs A need to urinate more often especially at night Diagnosis is by physical examination and renal imaging with duplex ultrasonography radionuclide imaging or magnetic resonance angiography Angiography is done before definitive treatment with surgery or angioplasty Renovascular hypertension is the most common cause of secondary hypertension high blood pressure that can be attributed to a specific cause It is responsible for about 1 percent to 2 percent of the 50 million estimated cases of hypertension in the United States
