Second Chinburg Conjecture For Quaternion Fields:

The Second Chinburg Conjecture for Quaternion Fields Jeff Hooper, Victor Percy Snaith, Minh Van Tran, 2000 The Second Chinburg Conjecture relates the Galois module structure of rings of integers in number fields to the values of the Artin root number on the symplectic representations of the Galois group This book establishes the Second Chinburg Conjecture for various quaternion fields *Some Families of Quaternion Fields and the Second Chinburg Conjecture [microform]* Jeff Hooper, 1996 **Algebraic K-Groups as Galois Modules** Victor P. Snaith, 2012-12-06 This volume began as the last part of a one term graduate course given at the Fields Institute for Research in the Mathematical Sciences in the Autumn of 1993 The course was one of four associated with the 1993 94 Fields Institute programme which I helped to organise entitled Artin L functions Published as 132 the final chapter of the course introduced a manner in which to construct class group valued invariants from Galois actions on the algebraic K groups in dimensions two and three of number rings These invariants were inspired by the analogous Chin burg invariants of 34 which correspond to dimensions zero and one The classical Chinburg invariants measure the Galois structure of classical objects such as units in rings of algebraic integers However at the Galois Module Structure workshop in February 1994 discussions about my invariant $0 \cdot 1 \cdot L \cdot K \cdot 3$ in the notation of Chapter 5 after my lecture revealed that a number of other higher dimensional co homological and motivic invariants of a similar nature were beginning to surface in the work of several authors Encouraged by this trend and convinced that K theory is the archetypical motivic cohomology theory I gratefully took the opportunity of collaboration on computing and generalizing these K theoretic invariants These generalizations took several forms local and global for example as I followed part of number theory and the prevalent trends in the Galois Module Structure arithmetic geometry

The Lifted Root Number Conjecture and Iwasawa Theory Jürgen Ritter, Alfred Weiss, 2002 This paper concerns the relation between the Lifted Root Number Conjecture as introduced in GRW2 and a new equivariant form of Iwasawa theory A main conjecture of equivariant Iwasawa theory is formulated and its equivalence to the Lifted Root Number Conjecture is shown subject to the validity of a semi local version of the Root Number Conjecture which itself is proved in the case of a tame extension of real abelian fields **Desingularization of Nilpotent Singularities in Families of Planar Vector**

Fields Daniel Panazzolo, 2002 This work aims to prove a desingularization theorem for analytic families of two dimensional vector fields under the hypothesis that all its singularities have a non vanishing first jet Application to problems of singular perturbations and finite cyclicity are discussed in the last chapter *On the Foundations of Nonlinear Generalized Functions I and II* Michael Grosser, 2001 In part 1 of this title the authors construct a diffeomorphism invariant Colombeau type differential algebra canonically containing the space of distributions in the sense of L Schwartz Employing differential calculus in infinite dimensional convenient vector spaces previous attempts in this direction are unified and completed Several classification results are achieved and applications to nonlinear differential equations involving singularities are

Proper Maps of Toposes Ieke Moerdijk, Jacob Johan Caspar Vermeulen, 2000 We develop the theory of compactness of maps between toposes together with associated notions of separatedness This theory is built around two versions of propriety for topos maps introduced here in a parallel fashion The first giving what we simply call proper maps is a relatively weak condition due to Johnstone The second kind of proper maps here called tidy satisfy a stronger condition due to Tierney and Lindgren Various forms of the Beck Chevalley condition for lax fibered product squares of toposes play a central role in the development of the theory Applications include a version of the Reeb stability theorem for toposes a characterization of hyperconnected Hausdorff toposes as classifying toposes of compact groups and of strongly Hausdorff coherent toposes as classifying toposes of profinite groupoids Our results also enable us to develop further particular aspects of the factorization theory of geometric morphisms studied by Johnstone Our final application is a so called lax descent theorem for tidy maps between toposes This theorem implies the lax descent theorem for coherent toposes conjectured by Makkai and proved earlier by Zawadowski

Maximum Entropy of Cycles of Even Period Deborah Martina King, John Bruce Strantzen, 2001 This book is intended for graduate students and research mathematicians interested in dynamical systems and ergodic theory

Spectral Decomposition of a Covering of $GL(r)$: the Borel case Heng Sun, 2002 Let F be a number field and \mathbf{A} the ring of adèles over F Suppose \overline{G} \mathbf{A} is a metaplectic cover of G \mathbf{A} $GL(r)$ \mathbf{A} which is given by the n th Hilbert symbol on \mathbf{A}

Sub-Laplacians with Drift on Lie Groups of Polynomial Volume Growth Georgios K. Alexopoulos, 2002 This work is intended for graduate students and research mathematicians interested in topological groups Lie groups and harmonic analysis

Mutual Invadability Implies Coexistence in Spatial Models Richard Durrett, 2002 In 1994 Durrett and Levin proposed that the equilibrium behavior of stochastic spatial models could be determined from properties of the solution of the mean field ordinary differential equation ODE that is obtained by pretending that all sites are always independent Here we prove a general result in support of that picture We give a condition on an ordinary differential equation which implies that densities stay bounded away from 0 in the associated reaction diffusion equation and that coexistence occurs in the stochastic spatial model with fast stirring Then using biologists notion of invadability as a guide we show how this condition can be checked in a wide variety of examples that involve two or three species epidemics diploid genetics models predator prey systems and various competition models

Smooth Molecular Decompositions of Functions and Singular Integral Operators John E. Gilbert, 2002 Under minimal assumptions on a function ψ the authors obtain wavelet type frames of the form $\psi_{j,k,r}$ $DEGREES 1 2 n j \psi r DEGREES j x s k j$ in integer k in integer $DEGREES n$ for some $r \geq 1$ and $s \geq 0$ This collection is shown to be a frame for a scale of Triebel Lizorkin spaces which includes Lebesgue Sobolev and Hardy spaces and the reproducing

formula converges in norm as well as pointwise a e The construction follows from a characterization of those operators which are bounded on a space of smooth molecules This characterization also allows us to decompose a broad range of singular integral operators in ter

Basic Global Relative Invariants for Homogeneous Linear Differential Equations Roger Chalkley, 2002 Given any fixed integer $m \geq 3$ the author presents simple formulas for $m \geq 2$ algebraically independent polynomials over \mathbb{Q} having the remarkable property with respect to transformations of homogeneous linear differential equations of order m that each polynomial is both a semi invariant of the first kind with respect to changes of the dependent variable and a semi invariant of the second kind with respect to changes of the independent variable These relative invariants are suitable for global studies in several different contexts and do not require Laguerre Forsyth reductions for their evaluation In contrast all of the general formulas for basic relative invariants that have been proposed by other researchers during the last 113 years are merely local ones that are either much too complicated or require a Laguerre Forsyth reduction for each evaluation

Non-Uniform Lattices on Uniform Trees Lisa Carbone, 2001 This title provides a comprehensive examination of non uniform lattices on uniform trees Topics include graphs of groups tree actions and edge indexed graphs $\text{Aut } X$ and its discrete subgroups existence of tree lattices non uniform coverings of indexed graphs with an arithmetic bridge non uniform coverings of indexed graphs with a separating edge non uniform coverings of indexed graphs with a ramified loop eliminating multiple edges existence of arithmetic bridges This book is intended for graduate students and research mathematicians interested in group theory and generalizations

The Submanifold Geometries Associated to Grassmannian Systems Martina Brück, 2002 This work is intended for graduate students and research mathematicians interested in differential geometry and partial differential equations

Some Generalized Kac-Moody Algebras with Known Root Multiplicities Peter Niemann, 2002 Starting from Borchers fake monster Lie algebra this text constructs a sequence of six generalized Kac Moody algebras whose denominator formulas root systems and all root multiplicities can be described explicitly The root systems decompose space into convex holes of finite and affine type similar to the situation in the case of the Leech lattice As a corollary we obtain strong upper bounds for the root multiplicities of a number of hyperbolic Lie algebras including AE_3

Stable Homotopy over the Steenrod Algebra John Harold Palmieri, 2001 This title applies the tools of stable homotopy theory to the study of modules over the mod p Steenrod algebra A DEGREES More precisely let A be the dual of A DEGREES then we study the category $\text{mathsf{stable } A}$ of unbounded cochain complexes of injective comodules over A in which the morphisms are cochain homotopy classes of maps This category is triangulated Indeed it is a stable homotopy category so we can use Brown representability Bousfield localization Brown Comenetz duality and other homotopy theoretic tools to study it One focus of attention is the analogue of the stable homotopy groups of spheres which in this setting is the cohomology of $\text{mathrm Ext } A \text{ DEGREES } \text{mathbf{F}}_p \text{mathbf{F}}_p$ This title also has nilpotence theorems periodicity theorems a convergent chromatic tower and a nu

Multi-Interval Linear Ordinary Boundary Value Problems and Complex Symplectic Algebra William Norrie Everitt, Lawrence Markus,2001 A multi interval quasi differential system $I_r M_r w_r$ in Ω consists of a collection of real intervals I_r as indexed by a finite or possibly infinite index set Ω where $\text{card } \Omega \geq \aleph_0$ is permissible on which are assigned ordinary or quasi differential expressions M_r generating unbounded operators in the Hilbert function spaces $L_r^2 \equiv L^2(I_r, w_r)$ where w_r are given non negative weight functions For each fixed r in Ω assume that M_r is Lagrange symmetric formally self adjoint on I_r and hence specifies minimal and maximal closed operators T_{0r} and T_{1r} respectively in L_r^2 However the theory does not require that the corresponding deficiency indices d_r and \bar{d}_r of T_{0r} are equal e.g the symplectic excess $Ex_r = d_r - \bar{d}_r \neq 0$ in which case there will not exist any self adjoint extensions of T_{0r} in L_r^2 In this paper a system Hilbert space $\mathbf{H} = \sum_{r \in \Omega} L_r^2$ is defined even for non countable Ω with corresponding minimal and maximal system operators \mathbf{T}_{0r} and \mathbf{T}_{1r} in \mathbf{H} Then the system deficiency indices $\mathbf{d} = \sum_{r \in \Omega} d_r$ and $\mathbf{\bar{d}} = \sum_{r \in \Omega} \bar{d}_r$ are equal system symplectic excess $Ex = \mathbf{d} - \mathbf{\bar{d}}$ if and only if there exist self adjoint extensions \mathbf{T} of \mathbf{T}_{0r} in \mathbf{H} The existence is shown of a natural bijective correspondence between the set of all such self adjoint extensions \mathbf{T} of \mathbf{T}_{0r} and the set of all complete Lagrangian subspaces \mathbf{L} of the system boundary complex symplectic space $\mathbf{S} = \mathbf{D}(\mathbf{T}_{1r}) \oplus \mathbf{D}(\mathbf{T}_{0r})$ This result generalizes the earlier symplectic version of the celebrated GKN Theorem for single interval systems to multi interval systems Examples of such complete Lagrangians for both finite and infinite dimensional complex symplectic \mathbf{S} illuminate new phenomena for the boundary value problems of multi interval systems These concepts have applications to many particle systems of quantum mechanics and to other physical problems
