Bureau of Internal Revenue, 1960. *Lone Wolf: True Stories Of Spree* Pan Pantziarka, 2014-10-31 Cases of lone killers embarking on slaughter sprees have occurred with frightening regularity since the late 1980s. People like Michael Ryan Thomas Hamilton Martin Bryant and Oklahoma bomber Timothy McVeigh. What drives these men and it is always men to turn on friends, family and strangers in acts of senseless rage and slaughter. In the wake of the summer of 1999 in which four incidents of spree killing shocked the world, this is a look at a chilling new trend of brutal and indiscriminate killing that blights our civilized society. Telematics and Work J.H. Erik Andriesson, Robert A. Roe, 2013-05-24 This volume is part of a publication series emerging from an international interdisciplinary study group on New Technologies and Work. NeTWork is sponsored by the Werner Reimers Foundation Bad Homburg Germany and the Maison des Sciences de l'Homme Paris. The NeTWork study group has set itself the task of intellectually penetrating various problem domains posed by the introduction and spread of new technologies in work settings. This problem focus requires interdisciplinary cooperation. The usual mode of operating is to identify an important problem within the NeTWork scope to attempt to prestructure it and then to invite original contributions from European researchers or research teams actively involved in relevant analytic or developmental work. A specific workshop serves to cross-fertilize the different approaches and to help to integrate more fully the individual contributions. The concept of telematics refers to the integration of computer telecommunication and information technologies. It alludes to the opportunities presented by the technical means to communicate and transfer data over large distances by intelligent equipment. Teleshopping, teleconferencing, teleworking and telebanking are but a few examples of a development which influences both public and private environments. Both households and workplaces are likely to be thoroughly changed by telematics. This publication emphasises the application of telematics in working environments. The central questions of the book are: How will the present and future development of telematics effect the nature and organization of work and under which conditions will this development be optimal? From the various contributions it is clear that telematics is not a single direct cause or determinant of particular changes in work and organization. The development and application of telematics depend on decision making of actors at a political scene both outside and inside the work organizations. The effects of the use of these applications appear to be co-determined by many other factors. In fact the technology interacts with political, economic and social factors in a complex process that shapes new organizational forms and work relationships.
