*Mechanisms of Secondary Brain Damage* A. Baethmann, K. G. Go, A. Unterberg, 2013-03-09 A distinction between primary and secondary brain damage of various origin particularly in acute lesions such as head injury and ischemia is not entirely new The concept is of practical significance because it is the foremost intention of all clinical efforts to prevent or at least attenuate the development of secondary sequelae Primary damage to nervous elements usually cannot be influenced by treatment Its prevention is the objective of prophylactic measures The current volume gathered prominent scientists and clinicians from various fields to provide a competent introduction and survey of the various aspects involved in secondary brain damage It was attempted to provide criteria for the distinction between the primary and secondary phenomena on a morphological and functional level on the basis of the kinetics involved and most importantly regarding the different specific manifestations such as disturbances of microcirculation aspects of the blood brain barrier and of cellular structure and

function at a molecular level Although it was not expected that a grand unifying hypothesis will be reached reconcilable with the many occasionally opposing views on such a complex subject nevertheless the present volume attains an appropriate result It can best be described as a mosaic of many different pieces which only as an ensemble reflect the current state of the art
