Richard Dukelow, 2018-02-06 While research has enabled us to better

understand the nonhuman primates they have repaid that by repaid that by providing medical scientists with important tools for the study of human biomedical problems This book is about those research tools The book was designed by identifying areas of human medical research that are under intensive research study today Authors were then selected based on their expertise at using nonhuman primates as models for the human condition Each was asked to use as comparative an approach as models for the human condition Each was asked to use a comparative an approach as possible to provide the reader with knowledge relating to the usefulness of various nonhuman primate species to each specific research area

*Lessons from Laron Syndrome (LS) 1966-1992* Zvi Laron, John S. Parks, 1993-01-01 Laron Syndrome LS is a disease characterized by resistance to growth hormone GH and caused by molecular defects of the GH receptor leading to a deficiency of insulin like growth factor 1 IGF 1 and a significant impairment of growth The syndrome is a unique human model of a peptide hormone receptor defect and GH IGF 1 interaction It offers the opportunity to study the consequences of long term IGF 1 deficiency and the role of IGF 1 in growth and metabolism With the recent biosynthesis of IGF 1 and the initiation of IGF 1 therapy a whole new world of basic biological interactions is opening up This volume brings together leading researchers in genetics endocrinology pediatrics biochemistry physiology and pharmacology to summarize what is now known about LS and to discuss the lessons learned from studying and treating this disease since its initial description in 1966 Special features include the demography of LS and the first data on the long term IGF 1 treatment of a large group of patients

*Shock and the Adult Respiratory Distress Syndrome* Wolfgang J. Kox, David J. Bihari, 2012-12-06 The interrelated syndromes of shock and the adult respiratory distress to attract the attention of both clinical and syndrome ARDS continue laboratory scientists This reflects both the size of the problem and its unresponsiveness to current lines of treatment Doubtless a greater appreciation of the underlying pathophysiological disturbances during the past two decades has led to appropriate action and increased survival in the early stages but once established these syndromes have remained remarkably immune to a wide spectrum of therapeutic modalities This observation stresses the importance of prevention but also indicates the need for continued research into the nature of the established syndromes and the means whereby they may be reversed Drs Kox and Bihari are to be congratulated on bringing together within the covers of this volume many of the acknowledged European experts in these two fields of investigation Each author has provided an up to date account of his current experimental and clinical research and their combined contributions makes fascinating reading Undoubtedly these are exciting times in the development of understanding of shock and ARDS Inevitably more questions are raised than answers provided but the accumulated knowledge presented here adds significantly to our understanding of this complex biological jigsaw From this corporate endeavour will come the clinically useful developments of the future and with them the ultimate hope that the term refractory shock may be finally removed from our vocabulary

**Walker's Pediatric Gastrointestinal Disease** Ronald E. Kleinman, Olivier-Jean Goulet, Giorgina Mieli-Vergani, Ian R. Sanderson, Philip M. Sherman, Benjamin L. Shneider, 2018-06-04

*Hyperglycemia, Diabetes and Vascular Disease* Neil Ruderman, Joseph Williamson, Michael Brownlee, 2013-05-27 It is estimated that 1 5% of the world's population is affected by some form of diabetes. Patients with these disorders are highly likely to develop microvascular pathology in the retina and glomerulus and they are at a 2 6 fold greater risk for atherosclerotic vascular disease than individuals without diabetes. In addition hypertension is far more prevalent in patients with diabetes than in the general population. As a consequence of these complications diabetes is a leading cause of blindness and renal failure in young and middle aged adults and it is a major risk factor for coronary heart disease stroke and peripheral vascular disease in the Western world. An understanding of the relationship of these vascular complications to diabetic hyperglycemia has become a critical issue for clinicians in recent years since the prevalence of diabetes appears to be increasing dramatically world wide. In addition it is now possible to achieve improved glycemic control in many patients although not without incurring other risks. This volume explores two principal hypotheses concerning these complications. One is that hyperglycemia underlies or at least contributes to the pathogenesis of both micro and macrovascular disease in patients with diabetes. The other is that it does so by producing specific metabolic and biochemical alterations in the vascular wall that lead to abnormalities in its function and ultimately its structure.

*Laron Syndrome - From Man to Mouse* Zvi Laron, J. Kopchick, 2010-11-25 Laron syndrome (LS) or primary growth hormone (GH) insensitivity was first described in 1966. Since then many patients worldwide have been diagnosed with LS which involves defects in the GH receptor that cause combined congenital deficiency of GH and IGF I activities. In this comprehensive book the authors draw upon 50 years of multidisciplinary clinical and investigative follow up of the large Israeli cohort of LS patients. The genetic basis of the syndrome is fully considered and all aspects of the pathophysiology of IGF I deficiency are described. Data derived from the recently generated mouse model of LS are reviewed and compared with the human LS experience. Valuable advice is provided on treatment and treatment effects such as metabolic effects adipose tissue alterations and impact on aging are fully explored. Together this book condenses consolidates compares and contrasts data derived from the human and mouse LS experiences and provides a unique resource for clinical and basic scientists to evaluate and compare IGF I and GH actions.

**Topics in Biomedical Gerontology** Pramod C. Rath,Ramesh Sharma,S. Prasad,2016-10-20 This book presents a collection of articles on various aspects of current research on aging These include model systems cellular biochemical and molecular aspects of experimental aging research as well as selected intervention studies on age related diseases Aging is a global challenge to human society Children are always in a hurry to become adults while adults produce offspring and add to the gene pool However after adulthood or the attainment of reproductive maturity all physiological parameters of the living organism start to undergo the aging process Old age sets in slowly but surely and usually continues for a prolonged period If vigor and vitality are the main advantages of adulthood old age offers the rewards of experience and maturity Biologists ask questions such as Why do we age How do we become old Is it possible to slow down postpone or even prevent aging In turn medical experts ask What are the diseases associated with old age Are there medicines that can help affected elderly patients In fact both groups are asking themselves how can we add more health to old age Healthy aging is the dream of every individual But to achieve this it is fundamental that we first understand the cellular biochemical and molecular basis of the aging process in mammalian cells tissues and intact living organisms which can serve as experimental model systems in Biomedical Gerontology Once the biology of aging is understood at the genetic and molecular levels interventional approaches to aging and its associated diseases may be easier to plan and implement at the preclinical level
