Sedimentary Facies Analysis A. Guy Plint, 2009-04-13 This book celebrates the professional career of Harold Reading who has played a leading role in the development of the IAS and has been at the roots of the development of facies sedimentology as an art in itself and as a major tool in the broader field of geology This special collection of original research papers from

Harold Reading's students covers the wide range of his research interests and reflects the power of facies sedimentology today. State of the art research papers in the important field of facies sedimentology a festschrift to one of the great names in sedimentology. *Economic Geology*, 1926. This book is designed for a one semester course in sedimentology taken by advanced undergraduate or graduate students. It gives detailed descriptions of sedimentary features and the analytical methods used to evaluate them and is intended to support and reinforce principles presented in lectures. Discussion of principles and processes is found in complementary texts such as Leeder's 1982 *Sedimentology process and product* and selected readings in professional journals. This book is not an exhaustive treatise of laboratory techniques and theory. The subject matter includes topics generally covered in courses entitled *Sedimentology* or *Sedimentation*. Sandstone and carbonate petrography is commonly given in a separate course. Furthermore this topic is covered in several current texts. For these reasons I have omitted petrographic methods with the exception of those applying to heavy minerals. I have included a rather extensive discussion of heavies because this topic is generally lacking in most modern texts. Every course in sedimentology is highly individualistic and material covered varies with the interests, background and point of view of the instructor. For these reasons some topics presented in this book are not necessarily covered in all courses. Similarly some instructors may find that their favorite topic is missing. I can only hope that this problem is minimal. Several chapters contain precise exercises to be completed by the student. Some must be done in the classroom where specimens are available for study. Others may be done outside of the classroom.
