*Atlas of Seeds and Fruits of Central and East-European Flora* Vít Bojnanský, Agáta Fargašová, 2007-11-07 The Atlas of Seeds and Fruits of Central and East European Flora presents nearly 4 800 seed illustrations supplemented with detailed seed descriptions brief plant descriptions and information on the locality and the native source of plants The Carpathian flora covered here occurs not only in the Carpathian Mountains but also in large lowlands extending towards the south north and

east and involves introduced and invading flora of more than 7 500 species This publication is unique on two counts Its scope extends to an unprecedented number of different plant seeds from a wide ranging region Moreover it presents descriptions in unusual detail

The Custodians of Biodiversity Manuel Ruiz,Ronnie Vernooy,2012-03-15 Globally local and indigenous approaches to conserving biodiversity crop improvement and managing precious natural resources are under threat Many communities have to deal with biopiracy for example As well existing laws are usually unsuitable for protecting indigenous and traditional knowledge and for recognizing collective rights such as in cases of participatory plant breeding where farmers researchers and others join forces to improve existing crop varieties or develop new ones based on shared knowledge and resources This book addresses these issues It outlines the national and international policy processes that are currently underway to protect local genetic resources and related traditional knowledge and the challenges these initiatives have faced In particular these themes are addressed within the context of the Convention of Biological Diversity and the International Treaty on Plant Genetic Resources for Food and Agriculture The authors broaden the policy and legal debates beyond the sphere of policy experts to include the knowledge holders themselves These are the custodians of biodiversity farmers herders and fishers in local communities Their experience in sharing access and benefits to genetic resources is shown to be crucial for the development of effective national and international agreements The book presents and analyzes this experience including case studies from China Cuba Honduras Jordan Nepal Peru and Syria Copublished with the International Development Research Centre IDRC

Community Seed Banks Ronnie Vernooy,Pitambar Shrestha,Bhuwon Sthapit,2015-05-15 Community seed banks first appeared towards the end of the 1980s established with the support of international and national non governmental organizations This book is the first to provide a global review of their development and includes a wide range of case studies Countries that pioneered various types of community seed banks include Bangladesh Brazil Ethiopia India Nepal Nicaragua the Philippines and Zimbabwe In the North a particular type of community seed bank emerged known as a seed savers network Such networks were first established in Australia Canada the UK and the USA before spreading to other countries Over time the number and diversity of seed banks has grown In Nepal for example there are now more than 100 self described community seed banks whose functions range from pure conservation to commercial seed production In Brazil community seed banks operate in various regions of the country Surprisingly despite 25 years of history and the rapid growth in number organizational diversity and geographical coverage of community seed banks recognition of their roles and contributions has remained scanty The book reviews their history evolution experiences successes and failures and reasons why challenges and prospects It fills a significant gap in the literature on agricultural biodiversity and conservation and their contribution to food sovereignty and security

*Final evaluation of the project "Conservation of biodiversity and mitigation of land degradation through adaptive management of agricultural heritage systems"* Food and Agriculture Organization of the United Nations ,2020-08-01 Morocco has a diverse

and varied landscape as part of the Mediterranean basin Nevertheless the country's valuable biodiversity including the Atlas Mountains and its oasis systems is threatened 30 000 hectares of plant cover are thus lost each year in Morocco this has significant consequences on the various species that depend on this cover for their protection and creates a vicious circle Biodiversity conservation and mitigation of land degradation through adaptive management of agricultural heritage systems are a priority for the country To face these challenges between April 2015 and December 2019 the Global Environment Facility GEF with the contribution of the Government of Morocco through its multiple Action Plans the effective involvement of the technical units of the central regional and provincial Directorates of the Ministry of Agriculture Fisheries and Rural Development MAPM and Water and Forests MAPMDREF have implemented a project with the participation of the populations of the various communities concerned Project activities were carried out at five oasis sites The contribution of the project to the current political discourse on oases and the pioneering role in the use of Globally important agricultural heritage system GIAHS certification are important achievements However although the project appears innovative and timely its relevance could have been strengthened with a more balanced intervention logic in terms of its objectives and the duration of its implementation The project relies on GIAHS certification to achieve its objectives but due to delays with the project start up and the dispersed and isolated nature of the sites not all of the certification processes were successful despite being initiated This created disparities in opportunities Beyond the labelling of crops the project aimed to promote biodiversity integration into markets notably through organic farming However several activities remain incomplete compromising the project's effectiveness The project suffers from poor communication both internally and externally As progress on the sites is uneven the sustainability of the project interventions is also uneven however the promotion of oasis cultures needs to be supported and sustained

Quality Declared Seed System Food and Agriculture Organization of the United Nations, 2006-01-01 The quality declared seed system as set out in the FAO Plant Production and Production Paper No 117 1993 ISBN 9251032785 has been widely used particularly by those working in the field of emergency seed supply and as a source of practical information on seed standards for a range of crop species The system provided an alternative for seed quality assurance which was less demanding than full seed quality control systems This publication sets out a revised version prepared by an expert consultation which offers a more explicit recognition of the role of national policies and the impact of some recent international obligations on seed provision and a clearer explanation on how quality declared seeds can accommodate local varieties The list of crops now includes 92 species of which 21 include open pollinated and hybrids and one includes also a synthetic variety In making this update FAO sought to improve seed supplies to farmers and thus to contribute to food security

**Farmers' Crop Varieties and Farmers' Rights** Michael Halewood, 2016-03-10 Crop plant varieties developed by local farmers commonly referred to as farmers varieties are problematic because there are no fixed taxonomic or legal definitions of them As a result policies to increase the share of benefits farmers receive from the use of

such varieties struggle to have an effect Aiming to clarifying these issues this volume explores the nature of farmers varieties in the context of their biological social and legal significance The book addresses the complexities of defining what farmers varieties are and how they differ from one another and from generic varieties It then charts the evolution of the concept of farmers rights from the dawn of genetic resources as a subject worthy of international attention to the first legal recognition of the concept through to current efforts to develop national level policies and laws Further the book examines outstanding policy making challenges linked to the absence of fixed taxonomic or legal definitions of farmers varieties Case studies are included from Africa Asia Europe and South America in which farmers researchers and policy advocates have been confronted with the issues raised in this book Various solutions are considered based on revised or new definitions of farmers varieties that reflect the biological and cultural realities in which they are produced and the relative costs and benefits of attempting to implement each of the policies discussed
