Seeing Spatial Form Michael Jenkin, Laurence R. Harris, 2006 Accompanying CD ROM contains color imagery and video clips associated with various chapters and the York Vision Conference itself Page v *Seeing Spatial Form* Michael R. M. Jenkin, Laurence R. Harris, 2005-10-27 The world is divided into objects things that are distinct from their backgrounds and that can move or be moved Objects are food and prey and threats as well as neutral items and it is critical to be able to see them How the form of an object is distinguished is one of the most basic yet least understood topics of research in vision perception The object defining system needs to operate in the real world where objects and viewers move and where the scene is cluttered rarely offering a clear unobscured view of any object How are we able to see and define objects using the complex pattern of light falling on the retina An object becomes visible if it differs sufficiently from its surroundings in its luminance color texture motion or depth Although the processes that use these different cues are quite distinct research has shown that they share some organizational principles This book *Seeing Spatial Form* is dedicated to David Martin Regan who has made so many contributions to our understanding of how we see objects Its chapters bring together ideas from some of the world's leading researchers in form vision to explain what we know about distinguishing form The book includes a CD ROM which contains additional demonstrations and color images that considerably enhance the chapter contents *Seeing Spatial Form* will be an invaluable resource for student and professional researchers in vision science cognitive psychology and neuroscience

Seeing More Samantha Matherne, Gardner Cowles Associate Professor of the Humanities Samantha Matherne, 2024-07-19 There is a long standing tradition in philosophy that defines imagination as engaging with things that are not real or present as a kind of fantasy Immanuel Kant offered an original theory of imagination as something that shapes our encounters with what is real present and pervades our lives This book brings this theory of imagining to light *Space*

Syntax Laura Vaughan, John Peponis, Ruth Conroy Dalton, 2025-04-30 Professor Bill Hillier spent most of his career at The Bartlett University College London where he founded and developed with a team of colleagues an original research programme that set the study of architecture on a firm scientific basis His transformational way of thinking about buildings and cities influenced generations of scholars researchers and practitioners within the built environment disciplines and way beyond in fields ranging from archaeology and biology to physics and zoology Space Syntax Selected papers by Bill Hillier provides a canon of works that reflects the progression of Hillier's ideas from the early publications of the 1970s to his most recent work published before his death in 2019 This selection of influential works ranges from his papers on architecture as a professional and research discipline through to his later papers that present a theory of the spatial structure of the city and its social functions By bringing together writing from across his career span of half a century with specially commissioned introductions by a wide range of international experts in the field we are able to contextualise and show the range and evolution of Hillier's key ideas

Narrative after Deconstruction Daniel Punday, 2012-02-01 Interrogating stories told about life after deconstruction and discovering instead a kind of afterlife of deconstruction Daniel Punday draws on a wide range of theorists to develop a rigorous theory of narrative as an alternative model for literary interpretation Drawing on an observation made by Jean-François Lyotard Punday argues that at the heart of narrative are concrete objects that can serve as lynchpins through which many different explanations and interpretations can come together Narrative after Deconstruction traces the often grudging emergence of a post deconstructive interest in

narrative throughout contemporary literary theory by examining critics as diverse as Jacques Derrida Gilles Deleuze Elizabeth Grosz and Edward Said Experimental novelists like Ronald Sukenick Raymond Federman Clarence Major and Kathy Acker likewise work through many of the same problems of constructing texts in the wake of deconstruction and so provide a glimpse of this post deconstructive narrative approach to writing and interpretation at its most accomplished and powerful

The Mind-Game Film Thomas Elsaesser,2021-03-28 This book represents the culmination of Thomas Elsaesser's intense and passionate thinking about the Hollywood mind game film from the previous two decades In order to answer what the mind game film is why they exist and how they function Elsaesser maps the industrial institutional challenges and constraints facing Hollywood and the broader philosophic horizon within which American cinema thrives today He demonstrates how the Persistence of Hollywood continues as it has adapted to include new twists and turns as well as revisions of past concerns as film moves through the 21st century Through examples such as *Minority Report* *Mulholland Drive* *Source Code* and *Back to the Future* Elsaesser explores how mind game films challenge us and play games with our perception of reality creating skepticism and self doubt He also highlights the mind game film's tendency to intervene in a complex fashion in the political moment by questioning the dominant power's intent to program both body and mind alike Prescient and compelling *The Mind Game Film* will appeal to students scholars and enthusiasts of media studies film studies philosophy and politics

The Oxford Handbook of Synesthesia Julia Simner,Edward M. Hubbard,2018-10-23 Synesthesia is a fascinating phenomenon which has captured the imagination of scientists and artists alike This title brings together a broad body of knowledge about this condition into one definitive state of the art handbook

The World of the Senses Rudolf Steiner,2014 In this concise series of lectures Rudolf Steiner shows how the human senses reveal the mysterious world of the will which is at once a spiritual and physical phenomenon The senses act as a portal connecting our physical and etheric bodies with what Steiner refers to as worlds of all pervading will and all pervading wisdom He elaborates this theme giving some unexpected and delightful insights into the senses of hearing and sight and in particular how we experience colour Steiner suggests that divine spiritual beings had different intentions for the formation of physical human beings but that adversary powers caused disruption leading to a more materialized constitution He describes disorders in the connections between the human physical etheric astral and ego bodies and the ill effects of one aspect overpowering the others He gives insight into human glandular secretions and why we need to eat and digest also connected to the intervention of adversary beings

Laws of Seeing Wolfgang Metzger,2009-08-21 The first English translation of a classic work in vision science from 1936 by a leading figure in the Gestalt movement covering topics that continue to be major issues in vision research today This classic work in vision science written by a leading figure in Germany's Gestalt movement in psychology and first published in 1936 addresses topics that remain of major interest to vision researchers today Wolfgang Metzger's main argument drawn from Gestalt theory is that the objects we perceive in visual experience are not the objects themselves but

perceptual effigies of those objects constructed by our brain according to natural rules Gestalt concepts are currently being increasingly integrated into mainstream neuroscience by researchers proposing network processing beyond the classical receptive field Metzger's discussion of such topics as ambiguous figures hidden forms camouflage shadows and depth and three dimensional representations in paintings will interest anyone working in the field of vision and perception including psychologists biologists neurophysiologists and researchers in computational vision and artists designers and philosophers Each chapter is accompanied by compelling visual demonstrations of the phenomena described the book includes 194 illustrations drawn from visual science art and everyday experience that invite readers to verify Metzger's observations for themselves Today's researchers may find themselves pondering the intriguing question of what effect Metzger's theories might have had on vision research if Laws of Seeing and its treasure trove of perceptual observations had been available to the English speaking world at the time of its writing *The Scope of Geography (RLE Social & Cultural Geography)* Rhoads Murphey, 2014-01-23 This book introduces the beginning student to the major concepts materials and tools of the discipline of geography While it presents geographic theory as whole and for each of its parts the chief emphasis is on concrete analysis and example rather than on abstraction an approach which has proven more successful for undergraduate courses than those with a more heavily theoretical bias The text was extensively re-written for the third edition which enhanced its clarity and effectiveness with expanded cartographic coverage Reading Images and Seeing Words Alan English, Rosalind Silvester, 2004 Focussing on both traditional and modern media theatre fiction poetry graphic art cinema the essays of Reading Images and Seeing Words show how it is according to signifying codes rhetoric poetics metaphor that meaning and knowledge are produced Not the least value of this collection is the insight it gives into the multiple models of word image interaction and the rich ambiguity of the tautological and oxymoronic relations they embody **BOOK JACKET** **Place, Migration and Development in the Third World** Lawrence A. Brown, 2002-09-11 Providing a fresh examination of the nature of Third World development the author focuses on the characteristics of particular places and regions and their influences on behaviour This is an important study of the relationship between population movements and regional and national changes Spatial Turns Jaimey Fisher, Barbara Caroline Mennel, 2010 The phrase spatial turns signals the growing importance of space as an analytical as well as representational category for culture The volume addresses such emerging modes of inquiry by bringing together for the first time essays that engage with spatial turns spatiality and the theoretical implications of both in the context of German culture history and theory Migrating from fields like geography urban studies and architecture the new centrality of space has transformed social science fields as diverse as sociology philosophy and psychology In cultural studies productive analyses of space increasingly cut across the studies of literature film popular culture and the visual arts Spatial Turns brings together essays that apply a spatial analysis to German literature and other media and engages with specifically German theorizations of space by such figures as Siegfried Kracauer and Walter

Benjamin The volume is organized in four sections Mapping Spaces addresses cartography in all forms and in its intersection with culture Spaces of the Urban takes up one of the key sites of spatial studies the city Spaces of Encounter considers how Germany has become a contact zone for multiple ethnicities and Visualized Spaces concerns the theorization of space in film and new media studies Vision in 3D Environments Laurence R. Harris, Michael R. M. Jenkin, 2011-07-07 Biological and machine systems exist within a complex and changing three dimensional world We appear to have no difficulty understanding this world but how do we go about forming a perceptual model of it Centred around three key themes depth processing and stereopsis motion and navigation in 3D and natural scene perception this volume explores the latest cutting edge research into the perception of three dimension environments It features contributions from top researchers in the field presenting both biological and computational perspectives Topics covered include binocular perception blur and perceived depth stereoscopic motion in depth and perceiving and remembering the shape of visual space This unique book will provide students and researchers with an overview of ongoing research as well as perspectives on future developments in the field Colour versions of a selection of the figures are available at www.cambridge.org 9781107001756 **Semiparallel Submanifolds in Space Forms** Ülo Lumiste, 2009-03-02 Quite simply this book offers the most comprehensive survey to date of the theory of semiparallel submanifolds It begins with the necessary background material detailing symmetric and semisymmetric Riemannian manifolds smooth manifolds in space forms and parallel submanifolds The book then introduces semiparallel submanifolds and gives some characterizations for their class as well as several subclasses The coverage moves on to discuss the concept of main symmetric orbit and presents all known results concerning umbilic like main symmetric orbits With more than 40 published papers under his belt on the subject Lumiste provides readers with the most authoritative treatment Global Cities and Global Order Simon Curtis, 2016-11-17 The re emergence of the city from the long shadow of the state in the late twentieth century was facilitated by the state itself The unprecedented size and scale of today s global cities and mega cities owe their conditions of possibility to a fundamental shift in the character of political order at the level of the international system This book argues that we must understand the rise of the global city as part of a wider process of the transformation of international political order and of the character of international society Global cities are an inscription of the ideals of a market society in space constructed and defended at the level of international society They embody the ascendance of a set of liberal principles at a certain moment in history a moment related to the hegemonic status of leading states in the second half of the twentieth century and the ability of those states to shape international norms But the evolution of these urban forms has also reflected the tendency for deregulated markets to generate inequality and polarisation these features are also inscribed in the spaces of global cities Global cities focus and amplify the tensions and contradictions within the contemporary international system and become key strategic sites for struggles over social justice and the character of political life in the twenty first century Global Cities and Global Order demonstrates the significance of

the re emergence of cities from the long shadow of the nation state is far reaching Only by examining the mechanisms by which cities have become empowered in the last few decades can we understand their new functions and capabilities in global politics

Postmodern Geographies Edward W. Soja, 2011-01-10 Postmodern Geographies stands as the cardinal broadcast and defence of theory's spatial turn From the suppression of space in modern social science and the disciplinary aloofness of geography to the spatial returns of Foucault and Lefebvre and the construction of Marxist geographies alert to urbanization and global development renowned geographer Edward W Soja details the trajectory of this turn and lays out its key debates An expanded critique of historicism and a refined grasp of materialist dialectics bolster Soja's attempt to introduce geography to postmodernity animating a series of engagements with Heidegger Giddens Castells and others Two exploratory essays on the postfordist landscapes of Los Angeles complete the book offering a glimpse of Soja's new geography carried into its highest register

A Guide to Spatial History Konrad Lawson, Riccardo Bavaj, Bernhard Struck, 2022-01-07 This guide provides an overview of the thematic areas analytical aspects and avenues of research which together form a broader conversation around doing spatial history Spatial history is not a field with clearly delineated boundaries For the most part it lacks a distinct unambiguous scholarly identity It can only be thought of in relation to other typically more established fields Indeed one of the most valuable utilities of spatial history is its capacity to facilitate conversations across those fields Consequently it must be discussed in relation to a variety of historiographical contexts Each of these have their own intellectual genealogies institutional settings and conceptual path dependencies With this in mind this guide surveys the following areas territoriality infrastructure and borders nature environment and landscape city and home social space and political protest spaces of knowledge spatial imaginaries cartographic representations and historical GIS research
