Seismic Isolation For Earthquake Resistant Structures Advances In Earthquake Engineering:

Seismic Isolation for Earthquake-resistant Structures Petros Ioannis Komodromos, 2000 Ground motion due to earthquake excitation often induces disastrous disturbances that severely damage structures and their contents Conventional earthquake resistant design focuses on the strengthening of structures to avoid collapse while little attention is paid to the prevention of damage as it is almost impossible to construct completely earthquake proof structures at reasonable cost This state of the art volume explores seismic isolation as an alternative and performance based design approach to minimise earthquake induced loads and resulting damage in low to medium rise buildings A discussion of the characteristics advantages and limitations of seismic isolation is followed by a demonstration of its capability to decouple a structure from the damaging effects of ground acceleration Describes currently used seismic isolation systems in detail Evaluates the performance of seismically isolated structures and provides examples of their response under earthquake action Proposes a preliminary design methodology for seismically isolated structures Accessible to both students and practising structural engineers who need to familiarise themselves with this approach

Seismic Isolation, Structural Health Monitoring, and Performance Based Seismic Design in Earthquake Engineering Azer A. Kasimzade, Erdal Şafak, Carlos E. Ventura, Farzad Naeim, Yoichi Mukai, 2018-08-13

This book features chapters based on selected presentations from the International Congress on Advanced Earthquake Resistance of Structures AERS2016 held in Samsun Turkey from 24 to 28 October 2016 It covers the latest advances in three widely popular research areas in Earthquake Engineering Performance Based Seismic Design Seismic Isolation Systems and Structural Health Monitoring The book shows the vulnerability of high rise and seismically isolated buildings to long periods of strong ground motions and proposes new passive and semi active structural seismic isolation systems to protect against such effects These systems are validated through real time hybrid tests on shaking tables Structural health monitoring systems provide rapid assessment of structural safety after an earthquake and allow preventive measures to be taken such as shutting down the elevators and gas lines before damage occurs Using the vibration data from instrumented tall buildings the book demonstrates that large distant earthquakes and surface waves which are not accounted for in most attenuation equations can cause long duration shaking and damage in tall buildings The overview of the current performance based design methodologies includes discussions on the design of tall buildings and the reasons common prescriptive code provisions are not sufficient to address the requirements of tall building design In addition the book explains the modelling and acceptance criteria associated with various performance based design guidelines and discusses issues such as selection and scaling of ground motion records soil foundation structure interaction and seismic instrumentation and peer review needs The book is of interest to a wide range of professionals in earthquake engineering including designers researchers and graduate students

Earthquake Resistant Engineering Structures

VIII C. A. Brebbia, Michele Maugeri, 2011 In order to protect the built environment in earthquake prone regions of the world

It is important to retrofit and rehabilitate existing structures and infrastructure as well as to ensure the optimal design and construction of new facilities. The high stakes in human life and property in urban densely populated urban areas has been driving research on advances in this field. These advances are presented biennially at a conference organized by the Wessex Institute of Technology. This book contains the papers from the latest conference in the series which began in 1991. The papers cover Geographical and geotechnical engineering, Seismic hazard and vulnerability, Seismic isolation and energy dissipation, Structural dynamics, Building performance during earthquakes, Retrofitting Lifelines, Material mechanics and characterisation, Nonlinear numerical analysis, Performance based design, Experimental studies, Safety and security and Innovative technologies.

Earthquake Resistant Engineering Structures X C.A. Brebbia, 2015-09-15. Containing the latest research on preparation for and mitigation of future earthquakes, this book addresses an area of increasing importance to many areas around the world. It contains research presented at the ninth and latest in a series of biennial conferences on the topic organised by the Wessex Institute. As world population has concentrated in urban areas, we have seen the consequences of natural disasters take an ever higher toll in human life and property. Adding to this trend, earthquake activity is being registered in areas that were not previously very active, thus the need for research into the application of technological advances to the specific area of earthquake engineering. This volume presents those advances. The papers cover Seismic Isolation and Energy Dissipation, Building Performance During Earthquakes, Nonlinear Numerical Analysis, Performance Based Design, Experimental Studies, Seismic Hazard Evaluation and Microzoning for Structural Design, Seismic Hazard Assessment, Case Studies.
